Section 1. Selected Economic Indicators

1. Labour Force 7
2. Industrial Production 8
3. Employment, Selected Industries 9
4. Income, Earnings and Hours 10
5. Retail Trade, New Motor Vehicle Sales 11
6. Construction 12
7. Exports and Imports 13
8. Selected Monthly Series 14
9. Income and Expenditure Accounts, Balance of International Payments 15
10. Real Domestic Product by Industry of Origin 16
11. Prices 17

Section 2. Population Statistics

1. Population, by Province 18
2. Immigration to Canada, by Country of Last Permanent Residence 18
3. Immigration to Canada, by Province of (Intended) Destination 18
4. Immigration to Canada, by (Intended) Occupational Group 18
5. Births, by Province 19
6. Deaths, by Province 19
7. Marriages, by Province 19

Section 3. System of National Accounts

1. Income and Expenditure Accounts

1.1. National Income and Gross National Product 20
1.2. Gross National Expenditure, Current Dollars 20
1.3. Gross National Expenditure, Constant Dollars 21

2. Domestic Product by Industry

2.1. Real Domestic Product by Industry of Origin 22
2.2. Industrial Production 23

3. Financial Accounts

3.1. Financial Flows 28, 106

4. Balance of International Payments

4.1. Canadian Balance of International Payments, Current Account, All Countries 30
4.2. Canadian Balance of International Payments, Current Account, Country Distribution 31
4.3. Canadian Balance of International Payments, Capital Account, All Countries 31

Section 4. Labour

1. Wages and Salaries, by Province 32
2. Wages and Salaries, by Industry 33
3. Labour Force 34
4. Labour Force, by Region 34
5. Employed, by Region 35
6. Employed Non-agriculture, by Region 35
7. Unemployed, by Region 36
8. Unemployment Rate, by Region 36
9. Not in the Labour Force, by Region 37
10. Activities of Unemployment Insurance Commission 37
11. Time Lost in Work Stoppages 38

Page

Section 4. Labour – Concluded:

12. Employment Indexes, Industrial Divisions 39
13. Employment Indexes, by Province 40
14. Employment Indexes, Manufacturing 41
15. Wages and Salaries, Industrial Divisions 41
16. Wages and Salaries, Manufacturing 42
17. Wages and Salaries, by Province 42
18. Average Hourly Earnings 43
19. Average Weekly Hours 44

Section 5. Prices

1. Industry Selling Price Indexes 45
2. General Wholesale Index 48
3. Other Wholesale Price Indexes 48
4. Consumer Price Indexes 49

Section 6. Manufacturing

1. Total Inventories, Shipments, Orders 50
2. Manufacturing Shipments, Selected Industries 51
3. Manufacturing Inventories, Selected Industries 53
4. Manufacturing Shipments and Unfiled Orders by Economic Use Classification 55
5. Manufacturing Inventories Owned and Raw Materials by Economic Use Classification 56
6. Manufacturing Goods in Process and Finished Products by Economic Use Classification 57
7. Tobacco and Beverages 58
8. Rubber 58
9. Rubber Products 59
10. Raw Hides, Skins, Finished Leather 59
11. Production of Leather Footwear 60
12. Primary Textiles 60
13. Production of Sawn Lumber 61
14. Pulpwood, Woodpulp and Newsprint 61
15. Primary Iron and Steel 62
16. New Motor Vehicles 63
17. Refrigerators, Freezers, Washing Machines and Clothes Dryers 64
18. Radio and Television Sets 64

Section 7. Fuel, Power, Mining

1. Total Electric Power 65
2. Electric Power Available, by Province 65
3. Coal and Coke 66
4. Crude Oil and Natural Gas 66
5. Petroleum Products 67
6. Metals 68
7. Non-metallic Minerals 69

Section 8. Construction

1. Building Permits, by Type 70
2. Building Permits, by Province 70
3. Dwelling Units, Started, All Areas 71
4. Dwelling Units, Completed, All Areas 71
5. Dwelling Units, Under Construction, All Areas 71
6. Dwelling Units Started, Centres 10,000 and Over 72
7. Dwelling Units Completed, Centres 10,000 and Over 72
8. Building Materials 73
9. Mortgage Loans, Approvals 74

Page

Section 9. Food and Agriculture

1. Farm Cash Receipts, by Source 75
2. Farm Cash Receipts, by Province 75
3. Farm Implement and Equipment Sales at Wholesale Prices, by Province 75
4. Slaughter and Cold Storage Stocks 76
5. Selected Agricultural Prices 76
6. Exports of Grains and Livestock Products 77
7. Milk, Milk Products and Eggs 77
8. Fish 78
9. Manufactured Food 78
10. Sugar 79

Section 10. Domestic Trade

1. Value of Retail Trade 80
2. Department Store Sales and Stocks 82
3. Wholesale Sales 82
4. Chartered Banks' General Loans 83
5. Retail Credit, by Type of Store 83
6. Consumer Credit, Selected Holders 84

Section 11. External Trade

1. Merchandise Exports, Major Countries and Areas........ 85
2. Merchandise Imports, Major Countries and Areas 86
3. Merchandise Exports, by Commodity 87
4. Merchandise Imports, by Commodity 89

Section 12. Transportation

1. Carloadings of Revenue Freight 91
2. Railway Operating Statistics 92
3. Operating Statistics of Canadian Motor Carriers 92
4. Operating Statistics of Canadian and Foreign Air Carriers 91
5. Operating Statistics of Canadian Pipelines 91
6. Shipping and Canal Traffic 92

Section 13. Finance

1. Bank of Canada 95
2. Chartered Banks 96
3. Currency and Chartered Bank Deposits 97
4. Cheques Cashed in Clearing Centres 98
5. Life Insurance Payments 99
6. Life Insurance Payments 99
7. Payments on Death Claims 100
8. Security Issues and Retirements 100
9. Corporation Profits 101
10. Security Prices 102
11. Stock Exchange Statistics 103
12. Commercial Failures and Liabilities 103
13. Government Revenues 104
14. Government Expenditures 105

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 3, Table 3.1 – Financial Flows

Financial Flows (fourth quarter 1969) are introduced with this issue. A covering technical note appears on page 6. Supplementary tables commencing on page 106 provide historical data for the fourth quarter 1968, and annual figures for 1968 and 1969.

Section 4, Tables 1 and 2 – Wages and Salaries

Estimates of labour income have been revised from 1951 to date. The revised estimates are based on the 1960 standard industrial classification and incorporate the most recent source data available. Estimates from 1967 are subject to further revisions as new annual data become available.

Section 6, Table 12 – Primary Textile

Cotton consumption of primary textiles have been dropped as data have become confidential.

Section 6, Table 13 – Production of sawn lumber

Columns P.E.I. and Manitoba have been dropped as no data are available.

Section 11, Table 3 – Merchandise exports

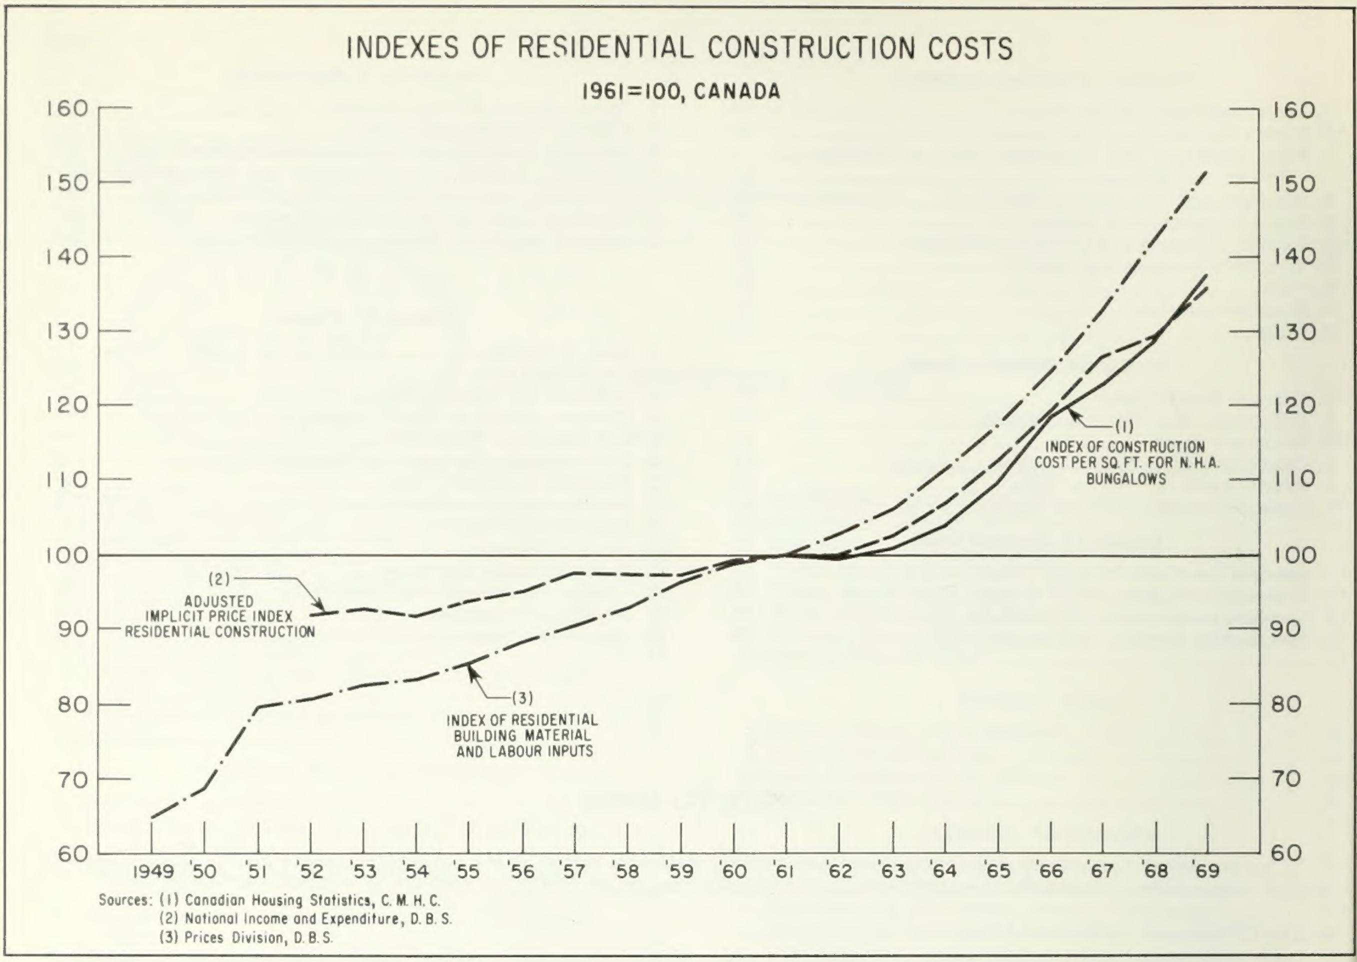
Revisions have been made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68 – 72) now include metalworking, woodworking machinery, etc.

Section 11, Table 4 – Merchandise imports

Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gaz field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

Section 12, Table 4 – Operating statistics of air carriers in Canada

The column "revenue cargo tons carried" has been discontinued as the data are no longer collected monthly.



INDEXES OF RESIDENTIAL CONSTRUCTION COSTS

DEVELOPMENTS IN PRICE STATISTICS FOR NEW RESIDENTIAL BUILDING CONSTRUCTION

Katharine Kemp*

Summary

Price indexes for residential construction are required for a variety of purposes, to serve both public and private users. Traditionally, the available measures of price change for this important sector of the economy have been base-weighted materials and labour indexes. Current developments in this field are chiefly directed towards producing indexes for the selling prices of the final product of the industry, that is, completed houses or apartments in place. This paper describes the developments underway.

Introduction

The importance of residential construction is illustrated by the fact that it usually accounts for twenty-five per cent or more of the total value of construction put in place in Canada in any given year, and as such represents the largest single segment of the construction dollar. Table 1 indicates the distribution of dollars spent on residential construction in recent years. Since there is evidence that prices are volatile for both finished dwellings and inputs in this industry because of the frequency and degree of change in demand and supply conditions in the market, it is considered important that adequate price indexes should be available for this sector of the economy. The particular purposes which such indexes would serve are summarized below for both public and private requirements.

In the public sector, price indexes for residential construction are needed for purposes of price analysis, including comparison of growth rates and inflationary trends among different industries and geographic areas. More generally, the assessment and management of the economy requires sensitive price indicators for residential construction because of its importance in dollar terms and its traditional erratic behaviour. Derivation of trends of real growth in construction requires measures to convert dollars spent in various years to prices of a given year, as in the production of National Expenditure estimates in constant (1961) dollars or in the addition to capital stock. The Consumer Price Index, which measures the impact of price change on the cost of purchasing a given basket of consumer goods and services, requires a price index for the housing component. Further uses of price statistics for residential construction include the measurement of differences in price movements among cities or countries, use by provinces or municipalities in assessing changes in values of construction as they affect tax roles or grants for construction.

In the private sector, the demands for indicators to measure the replacement cost of buildings constructed in previous periods are numerous: appraisal and insurance purposes, wage negotiations and to support briefs prepared for government agencies. Corporate planners use such information to assist them in planning investment strategy. There is also considerable interest in the feasibility of regional comparisons of price change to answer such questions as, "What relative rates of growth are found in different areas?"

While the above uses emphasize the need for temporal indexes to measure price changes over time, there are also numerous requirements for spatial indexes to measure differences from place to place, for example, employers wishing to determine allowances for employees transferred from one location to another; unions assessing regional wage policy; or mortgage suppliers, both public and private, evaluating the lending policies in various areas.

TABLE 1. Proportion of Total Construction Dollars Spent on Residential Building, by Type of Dwelling, 1964-69

	1964	1965	1966	1967	1968	1969
	percentage					
Single-detached[1]	16.0	13.8	13.3	13.8	15.1	14.7
Doubles and apartments[1]	12.9	12.5	10.2	11.1	13.0	14.3
Total residential construction[2]	**28.9**	**26.3**	**23.5**	**24.9**	**28.1^p**	**29.0[3]**
Total construction	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**

TECHNICAL NOTE

FINANCIAL FLOW ACCOUNTS

The Financial Flow Accounts represent another step in the articulation of the System of National Accounts. They measure the financial transactions in the economy and link them to the production of goods and services reflected in the Income and Expenditure Accounts. The Financial Flow Accounts are designed to provide within an integrated framework a systematic record of the interchange of financial claims. Accounts of this kind are a necessary starting point for any study of the influence of economic activity on financial market developments on demand for goods and services. As an extension of the Income and Expenditure Accounts, they are intended to show where savings are generated and how they are used. The Financial Flow Accounts are useful for exploring such questions as the role of interest rates as against other influences in clearing financial markets of excess demand for borrowed funds, the role of the commercial banks in the working of the financial system and the influence of changes in credit conditions or in holdings of financial assets on the spending decisions of business firms and consumer households.

The financial transactions of an economy have two basic characteristics:

(a) they are carried out by persons, business, government and others generally referred to as transactors;

(b) they are conducted through the use of a variety of claims, ranging from open accounts to highly formalized instruments such as mortgages, for many of which organized markets and specialized intermediary institutions exist.

For the purpose of the Financial Flow Accounts, both transactors and claims are organized into groups which are as homogeneous as possible. The former are identified as sectors and latter as categories.

The allocation of financial and economic activities to transactors by type of claim is the key to Financial Flow Accounts. It permits us to see how the sectors of the economy use their savings and borrowings. The saving of each sector can be measured either by calculating the difference between revenue and expenditure for a period of time or by measuring the changes in its assets and liabilities in the same period. The latter procedure gives a sectoral sources and uses of funds statement. The Financial Flow Accounts aggregate these sectoral sources and uses into a matrix showing these transactions for the whole economy. Since the financial assets of one sector are the liabilities of another sector, the total of financial assets must equal liabilities. (For this to be true, certain conventions have been adopted. Assets in the form of official holdings of gold are balanced by a liability in the foreign sector and coin has been shown as a liability of government.)

The Financial Flow Accounts major purpose is to relate the non-financial activity of the economy to the developments of the financial markets. Like a source and application of funds statement, it does not encompass transactions involved in the production process. The Financial Flow Accounts help us understand how the economy is financed and thus represents an extension to the National Income and Expenditure Accounts.

Canada is one of a number of countries which is now publishing or are preparing to publish Financial Flow Accounts. These accounts, although reflecting institutional differences between countries, all follow the same general pattern. This similarity of structure, for which the United Nations[1] must receive much of the credit, will assist in making international comparisons.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and other government investment income. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitary smoothing of crop production and standard seasonal adjustment for with-drawls of grain from farm stocks and the change in other farm-held inventories. Because of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. **Source: "National Income and Expenditure Accounts, First Quarter 1970" (D. B. S. 13-001).**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings. [4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) [5] See footnote 4, Table 1.1 **Source: "National Income and Expenditure Accounts, First Quarter 1970" (D. B. S. 13-001).**

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and ther short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing ifference between direct measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown for the first quarter 1970. SOR's were issued anuary 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly stimates of the Canadian Balance of International Payments (67-201 and 67-001), D. B. S.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1]See footnote 1 and source in Table 12. [2]Employment indexes in total manufacturing and in its total durable and non-durable components are given n Table 12. [3]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included n non-durable manufacturing. [4]Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review.** **Source: Prices and Price Indexes (62-002), D. B. S.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

monthly averages or months	shipments[1]	new orders received during month[3]	unfilled orders at end of month[4]	inventory at end of month						ratio of inventories owned to shipments
				owned[2]	held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i. e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), D. B. S.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] From January 1970 passenger cars financed for business purposes have been excluded from the numbers shown in this series. [3] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D.B.S.**

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] Electric and other. [5] Excludes apartment type machines. [6] End of period. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), D.B.S.**

[1] Includes record players. [2] Includes producers' shipments for export. [3] Includes portables. [4] Radio phonograph combinations. [5] Includes monaural and stereo with and without amplifiers. [6] Excludes producers' shipments for export. [7] Included with "total television receivers". [8] Customs clearance; radio sets include all types; television sets include colour and black and white. **Sources: Radio and Television Receiving Sets (43-004); Trade of Canada, Imports (65-007), D.B.S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities, does not include imports. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosena and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1]The data are collected for 1,400 municipalities and individual figures are available on request. [2]Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D. B. S.**

---

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D. B. S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage side. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan reas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The re- ainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D. B. S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. [3] Excl. of NFLD. Western grain prices used in the construction of the Index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 1969, equal in value to 100 lbs. of Index 100 live hog. [5] Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective January 1969, as a % of the price of 100 lbs. live hog, Index 100. [6] Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. [7] Quotations refer to steers all weights. [8] Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. roduction is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes aking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. ncludes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of producon will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** uarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Producon of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. B. S.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), D. B. S.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968, 1969 and 1970 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See also **Credit Statistics (61-004)**. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [4] Personal cash loans of up to $1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usually repaid in instalments. Amounts shown include interest and other unearned income finance charges. [6] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. [7] Starting with January 1970, the sales finance companies component of consumer credit has been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. **Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), D. B. S.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), D. B. S.**

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1967 and 1968 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Prior to 1970, ures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. These groups covered all air carriers with gross annual ing revenues of over $100,000 prior to January 1969 and over $150,000 during 1969. Figures for 1970 include only the operations of the seven largest airlines in ada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans- normally account for approximately 95 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [3] United States and other foreign riers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail excess baggage. **Source: Civil Aviation (51-001), D.B.S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver- of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and vided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of ada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. luding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

Note: Components may not add to totals due to partial revisions.

[1]End of period. [2]Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3]Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4]Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5]Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net s while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all nies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in la (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely rable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal ating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes torage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines.

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not de failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, ie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made r this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial res (61-002) Quarterly, D. B. S.**

[1] This statement includes only receipts relating to Budgetary Revenue. Excluded are Non-Budgetary Revenues such as Old Age Security Fund Taxes, Prairie Farm Assistance Act Levies, Employer and Employee Contributions to Government Held Funds (Unemployment Insurance, Superannuation etc.), Interest on Government Held Funds, and Taxes collected on behalf of and transferred to Other Governments. [2] For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1967-68. Figures are rounded and may not add to totals. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1]This statement not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, nces and investments. [2]Under the Technical and Vocational Training Assistance Act. [3]Government contributions under the Hospital Insurance and Diagnostic ices Act. [4]Includes treatment and rehabilitation services. [5]For comparison purposes, annual figures for 1965-66 and 1966-67 represent "Grants to Universities – nents to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). [7]As of April 1, 1969 Industry and Trade and Commerce are combined.

(Continued from page 5)

Based on the requirements outlined above, the demands for temporal price indexes for residential construction appear to fall into two main categories; indicators of price change for total residential construction, and price indexes for specified types of dwellings in specific geographical regions, such as three-bedroom bungalows in metropolitan areas or in different suburbs within metropolitan areas. In addition, increasing demands for spatial or intercity price comparisons require the matching of dwellings with similar characteristics among different areas. Price measures are thus in demand both at the aggregate level of residential construction and at a fine level of detail. Most users appear to require estimates of price change at least quarterly.

Current developments in the field of price indexes for residential construction reflect these various needs and thus a variety of approaches are underway as noted below.

The major difficulty in measuring price changes for the output of construction is the variety in types of structures which are seldom built identically from one time period to the next. In the last few years for example, houses have been growing larger, with more installed equipment, landscaping, paved driveways, and underground wiring included in the price. The price index statistician, concerned with measuring the change in price for an identical bundle of goods and services, must attempt to separate the effects of "non-price" changes, such as those mentioned above, from movements in price.

Table 2 provides a summary of the various price indexes which would serve the purpose of measuring changes in price over time for residential construction. The indexes are listed in descending order of preference, in terms of satisfying the conceptual requirements of providing selling price indexes for completed units of residential construction.

Practical and theoretical difficulties are associated with each type, as will be noted in the more detailed descriptions which follow. For this reason, and because there are specific uses for all the indexes mentioned, developments are underway in DBS in a number of areas.

TABLE 2. Types of Price Indexes Proposed or Under Development[1] for Residential Construction

Type of index	Current status	Examples mentioned or described in text
Pricing output directly:		
1. Selling prices for identical houses or apartments in place	Study underway for single-detached houses in metropolitan areas	Price index for houses built by project builders
2. Average selling prices with mix of characteristics controlled	Pilot study underway, using data for NHA houses	Regression study
3. Aggregation of indexes for elements of work in place e.g. poured basement, installed bathroom	Feasibility study underway (a) for non-residential construction	Constant Standards (b) Cost index – Great Britain
Pricing output by means of input indexes:		
4. Adjusted inputs – to simulate output	Produced by the National Income and Expenditure Division, DBS.	Index of materials and labour inputs into residential construction adjusted for changes in productivity and profit margins
Pricing inputs directly:		
5. Inputs	Published fixed-weighted indexes (c) of materials and labour; components available historically	Index of materials and labour inputs into residential construction
Other:		
6. Unit values	Published by (d) Central Mortgage and Housing Corporation	CMHC construction cost per square foot for National Housing Act bungalows Changes in average tender costs – Great Britain Changes in selling prices for all single units sold in United States Changes in values of building permit data

Current Developments

Emphasis in DBS so far has been placed on output prices for single detached dwellings, because of the relative importance of this type and because problems of lack of comparability of projects and limited numbers of transactions are less intractable than for multiples and apartments.

Developments to measure price change of completed dwellings are concentrated in areas (1) and (2) of Table 2, the project builders price index and the regression technique. Work underway for the remaining areas is also described below.

1. Price index for houses built by project builders

A growing number and proportion of single-detached houses are being built by builders who construct large numbers of houses, using similar plans and models in the same subdivision from one year to the next, with some models remaining on the market for as long as three or four years without substantial change. Alternatively, builders may construct similar houses on lots in different areas using the same plans for a period of time. A method currently being tested to provide an early solution to the problem of measuring price change for the output of residential construction is based on a study of selling prices of houses built by such project builders. A number of these builders have been approached and asked to provide prices in successive time periods for identical models. Each builder is asked to describe the model or models of his houses which represent the largest volume of his sales, to specify the usual specifications and equipment with which they are sold, and the terms of sale. It is necessary to phase out models which are losing popularity and phase in those which are assuming more sales volume so that a continuous by representative price sample can be established as in the following simplified example:

TABLE 3. Example of Sales Pattern of Hypothetical Builder from which Price Sample is to be Drawn

Models sold by a hypothetical builder	Percentage of all models sold in given year			
	1966	1967	1968	1969
A	40	20	5	–
B	30	30	20	–
C	–	30	10	15
D	–	–	20	20
E	–	–	–	25
All other	30	20	45	35

A suitable price sample for 1966 and 1967 for the hypothetical builder would use prices for models A and B. For 1967 and 1968, models B and C would be included. Changes in models are not permitted to affect the movement of the index at the time of substitution.

In many cases builders erecting 75 or more houses per year use prefabricated components and vary the mix of components to build apparently different models. This often means that a good proportion of the builders' production of houses can be represented by pricing relatively few models.

Land evaluation can present a major difficulty since a large builder often holds a tract of land for a number of years before building and selling the houses. The selling price usually includes both house and lot. As some users require a house price index only, it is necessary to estimate the value of the land. Another problem which arises, is that in some areas, similar houses may be built on lots in different locations which have different zoning requirements. This often results in the provision of different combinations of services with accompanying differences in price levels.

Reviews of data on hand indicate that adjustments for limited departures from specified models can be made in what appears to be a satisfactory fashion by deducting or adding the builder's valuation for the "extra". For example, a model priced currently may include a finished recreation room whereas previously it did not, or a garage may have been substituted for a carport.

It is expected that an aggregation of data from seven cities can be published for Canada in about a year's time. Publication of individual city data will depend on the assessment of the validity of the series used to represent the price movement for the city in question. The data will probably be published on a quarterly basis.

The advantage of this method is that it can provide an answer fairly quickly to the problem of measuring price change for single detached housing. The disadvantage is that only part of the universe is covered, and the sample portion may not provide a sufficiently reliable estimate of the price movement of all single unit residential construction.

2. The Regression Technique

In the United States a statistical technique applied in other fields is being used to overcome the problems of the changing mix and quality of houses in measuring price change of single houses. This method is based on average selling prices for houses in which the mix of characteristics for the houses included is controlled using the regression technique.[1] Stated more simply, a relationship is assumed to exist between the selling price of a house and many of its physical characteristics, such as size, area in which it is located and the number of bathrooms. By isolating the effects of these characteristics on price and thereby making it possible to hold constant artificially the mix of characteristics in the sample of houses priced, a base-weighted price index can be computed. With the relatively large number of single detached houses that are built each year, this technique is thought to be a useful one, because with many observations, it is likely that a variety of characteristics can be tested and the best combination selected for determining the price index.

It was found that a relatively short list of characteristics would explain a large proportion of the variation in price among houses. Adding additional characteristics did not significantly improve the results, probably because there is a very high degree of correlation between many of the characteristics. For example, a house with three bathrooms is more likely to have two garages, a finished recreation room, more bedrooms, etc. Thus the number of bathrooms, for example, can be thought of as representing a number of characteristics not explicitly stated.

Below is shown the U.S. unit value series based on average selling prices for all units sold and the price index for selling prices of new houses derived using the regression technique. It can be seen that the unit value series rose twice as fast in the period 1963-68. The difference may be thought of as an indicator of the impact of quality change. This implies that slightly more than half of the increase in average unit selling prices in this period has been a result of increasing "quality" or non-price factors.

TABLE 4. Comparison of Indexes of Unit Value for All Houses and Selling Prices Based on Regression Technique

	Index of changes in unit values, (average of all single units sold)[1]	Selling price index based on Regression technique[2]
1963	100.0	100.0
1964	106.2	101.1
1965	111.4	103.5
1966	120.7	106.5
1967	127.5	110.3
1968	137.8	117.9^{P}
Annual average % change	7.4	3.6

[2] Source: *Construction Report*, US Dept. of Census, various dates.

A pilot project is underway to test the usefulness of the regression approach for Canadian data. The success of this method depends on the identification of a set of characteristics which have an important influence on price. These characteristics can then be held constant, having the effect of removing price changes resulting from variations in the characteristics of houses sold over time and leaving only variations which are considered to be within acceptable limits for index purposes. Price changes remaining are thought to be "pure" price changes to a very large extent. Such a technique is likely to yield a useful aggregate measure for Canada but statistical limitations prevent the technique from being employed to provide detailed area indexes.

The regression procedure allows the decision to be made as to whether sufficient price variation can be considered attributable to physical characteristics. It then follows that the most important price-associated characteristics can be isolated and held constant. Successive subsequent analyses will indicate the minimum number of characteristics necessary to explain price variability among houses. It is possible to achieve the same results manually by classifying houses into categories with certain common characteristics, computing indexes for each "cell" and combining all the cells. It is likely, however, that there would be many cells with in-sufficient data to match over several years, and as a result many of the observations cannot be used. The regression technique allows more efficient use of the data, since it is possible to make use of observations even if they cannot be matched in different time periods. Also, using regression, statistical tests can be applied and results evaluated systematically and, with the computer, a variety of combinations of characteristics can be tested. The study will be based on National Housing Act records of houses sold and the characteristics recorded for each house; consequently, the sample will encompass about a third of the universe of new houses built. If the project is completed successfully, the method could be extended to a wider sample of houses representing the total universe of new houses built, providing that the necessary data, including market prices and physical characteristics of the houses, can be made available to DBS.

3. Price Index Based on Changes in Unit Prices for Work in Place

A method developed in Great Britain to derive a price index for the output of residential construction[2] relies on measuring changes in unit prices for about 23 commonly occurring items of work in place. The changes in *unit prices* are weighted to produce the "constant standards cost index". The index is restricted to traditionally built one-and two-storey local authority houses; that is, it relates only to houses built by the public sector, and not the private sector. Because it is not considered representative of the universe it has not been adopted as the official price statistic for residential construction.

The method is perhaps best described in terms of the work of a quantity surveyor. From the plans of a house, the quantity surveyor prepares a list of the materials and quantities required to build it and attaches prices to the list of items or elements necessary to put the work in place to derive an estimate of the total value of the house. In estimating current prices the quantity surveyor draws on his knowledge of prevailing prices bid by the suppliers based on contractors' usual sources of materials and labour. The estimated amounts may vary from the final prices paid for these elements.

In deriving the British index for public housing, prices for similar elements are identified over a period of time from the tender documents. The amounts used are those recorded at the stage tenders are accepted; thus the unit prices would incorporate the effects of such changes as a reduction in the number of man-hours required to put a particular unit in place.

The table below shows the comparison of the change in unit values for local authority houses in Great Britain with the "constant standards cost index". Again it is interesting to note the implication, as with the regression method, that slightly over half of the price change indicated by the unit value index is accounted for by "non-price" or "quality" factors during approximately the same time period.

TABLE 5. Housing Price Indexes Average Annual Increase, Great Britain, 1965-67

	Constant standards cost index (price index)	Changes in average tender costs (unit value index)	Change in quality (increase in unit costs at constant prices)
Average percentage increase	4	9	5

It should, of course, be noted that the list of items priced must be representative of the type of construction typically done so that the changes in price will reflect changes in construction generally.

Difficulties in this approach arise from the problem of identifying commonly occurring or "representative" elements of work in place, and in weighting together these elements to provide an aggregate index for all types of residential construction.

The outcome of a pilot project employing similar techniques, which was described in an earlier paper concerning non-residential and engineering construction price indexes,[3] will help to assess the usefulness of this approach for various types of residential construction in Canada.

5. Pricing Inputs Directly[4] – Indexes of Residential Building Materials and Wage Rates

The first residential construction price index published in Canada related to building materials and was described in a reference paper published in 1949.[5] Briefly, the building materials price index measured the price change of a representative group of building materials used in residential construction. It made no attempt to measure the price change of completed houses or houses in place. The weighting diagram used to combine the various materials was based on the estimated material requirements necessary to meet a specified housing goal in the years immediately following the Second World War.[6] Certain refinements were introduced into the index in 1966 when some commodity substitutions were introduced to make the index reflect more accurately current material usage in house construction. Components of this index are presented monthly in *Prices and Price Indexes* DBS Catalogue No. 62-002.

---

[2] More fully described in *Housing Statistics*, Great Britain, HMSO No. 10 July, 1968, page 79.

[3] Jones, C.M. quoted work.

[4] For sensibility, the input index is described before the adjusted input series.

[5] *Price Index Numbers of Residential Building Materials 1926-1948.*

Subsequently the materials indexes from 1961 forward have been revised in accordance with recently revised materials indexes in the Industry Selling Price Indexes.[7] A description of the revisions which have been made in the residential materials indexes will be presented in the May 1970 issue of *Prices and Price Indexes*. The effects of the revision are slight at the total level although some groups are affected substantially.

The appendices show the residential building materials index with major components, and the residential construction cost index on a 1961 base.

By combining the materials index described above with an index of construction wage rates, a residential construction cost index is derived which is illustrated in Chart 1 and provided in tabular form as Appendix B.

The major deficiency of this index as a deflator for values of construction put in place, its most important official use, is that it takes no account of changes in other important factors in construction costs, especially the impact of changes in productivity, and profit margins.

However, this criticism is not valid if the user requires an indication of price change for inputs into construction. Therefore, the input index will be maintained and improved. This series corresponds to measures produced by other countries and is thus readily available tool for making international comparisons in residential construction. Also, when more complete indexes of the output of the construction industry are available, a comparison between the input and the output series will yield much useful analytical material. In addition, the series are available for 35 years, a long history in the context of Canadian price indexes, and thus provide the only available insight into this portion of the economy over a long period.

The aims of the development work on the input cost index are (1) to publish sufficient detail by commodity and by trade so that users can make the best selection to suit their needs, (2) to update the weighting diagrams, (3) to maintain a representative price sample, (4) to expand regional price coverage, (5) to test the difference in price movement between manufacturers' and wholesalers' or retailers' selling price.

Materials component.—The price sample for materials is drawn from the prices collected for use in the calculation of the ISPI.[7] As more relevant item coverage is introduced it will also be incorporated in the building materials index. It is planned to extend the regional coverage modestly for items where it seems necessary and regional price series will be published as well, wherever possible. The use of manufacturers prices to represent adequately the movement of the more appropriate wholesale or retail prices is still under review. A few retail lumber prices are currently being collected which will help determine whether turning points and trends follow the manufacturers' selling prices and to establish whether it is preferable to price at the retail level. Some indication of regional variation in price trends and place-to-place comparisons will emerge from this study.

As few resources are being invested in this particular phase of the study, users who have particular interests in regional price data are urged to submit their comments and suggestions to the Dominion Bureau of Statistics to make sure that important needs are not being overlooked.

Labour component.—The labour portion of the index is currently based on union or agreed base rates only, that is, no attempt has been made to reflect changes in fringe packages, which include holiday pay, pension or welfare adjustments, and other employer costs. The evidence to date suggests that the movement of the fringe has been more marked than the movement of base rates since 1961. Hence the price movement of labour costs has likely been understated.

4. Adjusted Input Indexes

As stated above, the materials and labour index has defects as a measure of price change for the output of the residential construction industry or as a measure of purchase price of houses. A means by which the impact of changing productivity on labour costs can be measured has been employed in the revised National Accounts calculated in constant dollars to derive the implicit price index for residential construction.[8] Chart 1 shows the movement of the traditional materials and labour index and the adjusted implicit index. A productivity adjustment has been incorporated in the latter beginning in 1950 and an adjustment for changing profit margins beginning in 1957. Appendix C shows the trend of the old unadjusted index and the new revised adjusted series. By these means, it is hoped to bring the trend of the traditional input index closer to the desired index of selling prices for completed houses in that most of the important factors affecting price change for houses are reflected. This measure can be phased out as the results of projects described above can be made available.

[7] *Industry Selling Price Indexes, 1956-68*, DBS Catalogue No. 62-528.

[8] *National Income and Expenditure Accounts, 1926-1968*, DBS.

The adjustment used is similar to that used by he British in calculating their official cost index.[9] The productivity adjustment is derived by assuming relationship between changes in materials used er worker and changes in output per worker.

Unit Value Series — Central Mortgage and Housing Corporation

A possible source for measurement of price hange for new residential construction has been he unit value series published by Central Mortgage nd Housing Corporation,[10] representing changes in ost per square foot for bungalows built under the ational Housing Act. The CMHC series has the dvantage of being an output index rather than being ased on inputs, but it is a unit value series, that s, non-price changes as well as price changes are mbedded in the series. For example, the mix of ypes and price ranges of houses from which the eries is derived is continually changing. It is elieved that the series is biased upwards because f generally increasing sizes of houses, and the rovision of more services. Also, whenever the erms of the National Housing Act change, there is ikely to be a discontinuity in the series. For xample, the recent increase in the limit of NHA ortgages will undoubtedly have repercussions on he type, size and quality of the houses built under he NHA. Furthermore, the series refers to a partiular segment of the market. In 1968 NHA contructed bungalows numbered 20,614 or 27 per cent f a total of 75,339 single detached dwelling starts. or these reasons, the CMHC cost per square foot eries, as published, is not considered an approriate indicator of pure price change for new resiential construction. Similar arguments would hold gainst the use of unit values derived from building ermit data. The difference in trend between the ost per square foot or unit cost series and the raditional base-weighted materials and labour ndex can be observed on Chart 1. It can be seen that the input index has increased the most, with the construction cost per square foot for NHA bungalows showing the least movement, and the adjusted implicit index[8] moving a little faster than the cost per sq. ft. index.

Future Developments

Multi-unit Dwellings

It can readily be seen from Table 1 that multi-unit dwellings, particularly apartments, are assuming a more important share of the residential market. Therefore, attention will be devoted to this segment of the industry as noted below.

The difficulties of pricing completed apartment buildings are more complex than single houses, since it seldom happens that projects are so similar from one time period to the next as to make meaningful price comparisons possible for completed buildings. Each project is unique and contains a different mix of characteristics.

It is expected however that some of the methods being investigated for non-residential building construction will be applicable for apartment construction.[3] For instance, the price movement of the output of sub-trades such as pre-cast concrete, structural steel, plumbing etc., can be combined, with appropriate weights, to produce an estimate of price change for completed apartments. Alternatively, pricing of certain "model" buildings over time and from place to place will if successful, be an approach that can be utilized for apartment construction. This method employs quantity surveyors who price out the given building in successive time periods. Other methods being considered for single dwellings are less likely to be appropriate for apartments, although they will be useful for doubles, duplex and perhaps row housing.

APPENDIX B

Composite Indexes of Building Materials and Construction Wage Rates Canada, Annually 1935 - 69

(1961 = 100)[1]

Residential	Residential building materials price index (1)	Construction wage rate index[2] (2)	Composite index[3] residential construction (3)
1935	31.7	25.6	28.8
1936	33.0	25.8	29.5
1937	36.5	26.5	31.7
1938	34.7	27.2	31.1
1939	35.0	27.4	31.3
1940	37.7	28.6	33.3
1941	41.9	30.5	36.4
1942	44.8	32.4	38.8
1943	47.6	34.9	41.5
1944	50.1	35.5	43.1
1945	50.7	35.9	43.6
1946	52.8	39.3	46.3
1947	61.7	42.3	52.4
1948	74.4	48.1	61.7
1949	77.9	50.4	64.7
1950	83.0	53.0	68.6
1951	97.8	60.1	79.7
1952	97.4	62.8	80.7
1953	96.6	67.0	82.4
1954	94.9	70.4	83.1
1955	96.9	72.5	85.2
1956	100.1	75.4	88.2
1957	100.1	79.9	90.4
1958	99.2	85.7	92.7
1959	101.3	91.1	96.4
1960	100.7	97.0	98.9
1961	100.0	100.0	100.0
1962	100.7	104.4	102.5
1963	104.1	108.1	106.0
1964	109.5	113.1	111.2
1965	115.8	118.6	117.1
1966	120.5	128.1	124.2
1967	132.1	140.8	132.8
1968	132.4	152.8	142.1
1969	139.2	164.5	151.4

[1] These series have been arithmetically converted from the base 1949 = 100.

[2] Weights used to combine wage rate series: (Source: Dept. of Labour):

Labourer	46
Carpenter	30
Painter	7
Electrician	5
Plumber	5
Bricklayer and mason	3
Sheet metal worker	2
Truck driver	2
Total	**100**

[3] Weights used to combine materials and labour components:

(1) 62.5
(2) 37.5

ARTICLE:

Some Recent Developments and Plans in the Field of Merchandising and Services Statistics.

CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française, Revue Statistique du Canada, nº du catalogue 11–003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of the Dominion Bureau of Statistics. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Satistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other DBS publications:

..	figures not available
...	figures not appropriate or not applicable
–	nil or zero.
—	amount too small to be expressed
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

Section 1. Selected Economic Indicators

1. Labour Force 7
2. Industrial Production 8
3. Employment, Selected Industries 9
4. Income, Earnings and Hours 10
5. Retail Trade, New Motor Vehicle Sales 11
6. Construction 12
7. Exports and Imports 13
8. Selected Monthly Series 14
9. Income and Expenditure Accounts, Balance of International Payments 15
10. Real Domestic Product by Industry of Origin 16
11. Prices 17

Section 2. Population Statistics

1. Population, by Province 18
2. Immigration to Canada, by Country of Last Permanent Residence 18
3. Immigration to Canada, by Province of (Intended) Destination 18
4. Immigration to Canada, by (Intended) Occupational Group 18
5. Births, by Province 19
6. Deaths, by Province 19
7. Marriages, by Province 19

Section 3. System of National Accounts

1. Income and Expenditure Accounts

1.1. National Income and Gross National Product 20
1.2. Gross National Expenditure, Current Dollars 20
1.3. Gross National Expenditure, Constant Dollars 21

2. Domestic Product by Industry

2.1. Real Domestic Product by Industry of Origin 22
2.2. Industrial Production 23

3. Financial Accounts

3.1. Financial Flows 28

4. Balance of International Payments

4.1. Canadian Balance of International Payments, Current Account, All Countries 30
4.2. Canadian Balance of International Payments, Current Account, Country Distribution 31
4.3. Canadian Balance of International Payments, Capital Account, All Countries 31

Section 4. Labour

1. Wages and Salaries, by Province 32
2. Wages and Salaries, by Industry 33
3. Labour Force 34
4. Labour Force, by Region 34
5. Employed, by Region 35
6. Employed Non-agriculture, by Region 35
7. Unemployed, by Region 36
8. Unemployment Rate, by Region 36
9. Not in the Labour Force, by Region 37
10. Activities of Unemployment Insurance Commission 37
11. Time Lost in Work Stoppages 38

Section 4. Labour — Concluded:

12. Employment Indexes, Industrial Divisions 39
13. Employment Indexes, by Province 40
14. Employment Indexes, Manufacturing 41
15. Wages and Salaries, Industrial Divisions 41
16. Wages and Salaries, Manufacturing 42
17. Wages and Salaries, by Province 42
18. Average Hourly Earnings 43
19. Average Weekly Hours 44

Section 5. Prices

1. Industry Selling Price Indexes 45
2. General Wholesale Index 48
3. Other Wholesale Price Indexes 48
4. Consumer Price Indexes 49

Section 6. Manufacturing

1. Total Inventories, Shipments, Orders 50
2. Manufacturing Shipments, Selected Industries 51
3. Manufacturing Inventories, Selected Industries 53
4. Manufacturing Shipments and Unfiled Orders by Economic Use Classification 55
5. Manufacturing Inventories Owned and Raw Materials by Economic Use Classification 56
6. Manufacturing Goods in Process and Finished Products by Economic Use Classification 57
7. Tobacco and Beverages 58
8. Rubber 58
9. Rubber Products 59
10. Raw Hides, Skins, Finished Leather 59
11. Production of Leather Footwear 60
12. Primary Textiles 60
13. Production of Sawn Lumber 61
14. Pulpwood, Woodpulp and Newsprint 61
15. Primary Iron and Steel 62
16. New Motor Vehicles 63
17. Refrigerators, Freezers, Washing Machines and Clothes Dryers 64
18. Radio and Television Sets 64

Section 7. Fuel, Power, Mining

1. Total Electric Power 65
2. Electric Power Available, by Province 65
3. Coal and Coke 66
4. Crude Oil and Natural Gas 66
5. Petroleum Products 67
6. Metals 68
7. Non-metallic Minerals 69

Section 8. Construction

1. Building Permits, by Type 70
2. Building Permits, by Province 70
3. Dwelling Units, Started, All Areas 71
4. Dwelling Units, Completed, All Areas 71
5. Dwelling Units, Under Construction, All Areas 71
6. Dwelling Units Started, Centres 10,000 and Over 72
7. Dwelling Units Completed, Centres 10,000 and Over 72
8. Building Materials 73
9. Mortgage Loans, Approvals 74

Section 12. Transportation

1. Carloadings of Revenue Freight 91
2. Railway Operating Statistics 92
3. Operating Statistics of Canadian Motor Carriers 92
4. Operating Statistics of Canadian and Foreign Air Carriers 93
5. Operating Statistics of Canadian Pipelines 93
6. Shipping and Canal Traffic 94

Section 13. Finance

1. Bank of Canada 95
2. Chartered Banks 96
3. Currency and Chartered Bank Deposits 97
4. Cheques Cashed in Clearing Centres 98
5. Life Insurance Payments 99
6. Life Insurance Payments 99
7. Payments on Death Claims 100
8. Security Issues and Retirements 100
9. Security Prices 101
10. Stock Exchange Statistics 102
11. Commercial Failures and Liabilities 102
12. Government Revenues 103
13. Government Expenditures 104

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 1, Table 10 and Section 3, Table 2.1 — Real Domestic Product by Industry of Origin

Monthly R.D.P. indexes are now available from January 1969 to date. Work on these monthly series from 1961 to 1968 is in its final stage of completion and these results will be contained in a forthcoming reference paper planned for release later this year. For the time being the quarterly R.D.P. will continue to be published in Section 3, Table 2.1 of this publication. For further information see the April issue of DBS publication Catalogue No. 61-005 and its attached supplement.

Section 13, Table 9 — Corporation Profits before Taxes

The table has been dropped pending re-structuring. In the interim, users may refer to Industrial Corporations — Quarterly Financial Statistics, Catalogue No. 61-003.

RECENT DBS PUBLICATION OF INTEREST

The French edition of **CANSIM**: User's Manual for Data Retrieval and Manipulation, *Occasional, Catalogue No. 12-531 F (23 pp.), $1.50,* is now available.

SOME RECENT DEVELOPEMENTS AND PLANS IN THE FIELD OF MERCHANDISING AND SERVICES STATISTICS

G. Snyder*

Introduction

There is no question that increases in the scale, complexity and pace of business, community and government affairs have made it practically impossible for senior management and policy makers to arrive at well-informed decisions without the aid of carefully designed and elaborate information systems. Systems of this nature, in order to be effective, require the input of significant amounts of data of all types—data which are appropriate, rapidly available, and of good quality.

The Dominion Bureau of Statistics has become increasingly concerned over the significant statistical gaps which exist in the service trades area and over certain weaknesses in the merchandising statistics programme. This paper touches on some of the more important planned developments which the Bureau will put into operation within the next few years in order to minimize the gaps and improve the overall programme for publication of merchandising and service trades statistics.

One of the principal reasons why DBS is presently focusing a great deal of attention on these areas is due to the rapidly growing importance of trade and services in the Canadian economy. In 1966, for example, more than 890,000 persons or 12.0 per cent of the labour force were engaged in retail trade. This compares with 11.0 per cent of the labour force in 1961. The importance of retail trade, for government at least, lies in the fact that retail sales form the principal preliminary indicator of the strength of consumer demand and as such represent an important component in GNP estimates. The major weakness in the present retail trade series lies in the quality of the monthly estimates, which reflect certain sampling deficiencies, as well as in the lack of statistical coverage for certain kinds of business. Another problem in the retail trade statistical programme which is causing some concern is the present poor quality of inventory statistics.

In the service trades—which employed 480,000 persons in 1966 for those areas covered—the most significant problem confronting DBS is the presence of so many glaring gaps in the statistical coverage of this field. Even during census years, such areas as S.I.C. 864—Engineering and Scientific Services, S.I.C. 866—Legal Services, S.I.C. 891—Labour Organizations and Trade Associations, and S.I.C. 831—Religious Organizations are not surveyed. In other areas in the service field which **are** covered in Census years, significant omissions of selected kinds of business still exist. For example, most non-profit organizations (including recreational clubs, rowing clubs, tennis courts and yacht clubs) are not covered. There are significant omissions in other areas as well. As will be indicated in the following sections, plans are now being formulated, as part of the planning for the 1971 Census of Merchandising and Service Establishments, to improve and expand the scope of coverage in the service area. The Bureau is also acutely aware of the need for more **current** information on the service trades and a programme is now being designed which should meet this need within the next few years.

In addition to those areas already noted, the Dominion Bureau of Statistics is placing increased emphasis on the collection and publication of wholesale trade statistics. Attempts are being made to increase the professional and technical resources in the wholesale statistics programme and the Bureau is optimistic that the 1971 Census of Wholesaling will be the start of a new era in the publication of wholesale trade statistics which will be substantially improved in terms of quality and timeliness.

In the following sections of this paper, some of the major planned programmes for retail, wholesale and service trades statistics are described in detail; others, because of space and time limitations, are only touched on in general terms.

New Monthly Retail Trade Sample

At present, estimates of monthly retail sales are produced by means of a sample survey, utilizing a link-relative method of estimation in which results of the same firms are linked together and tied to a census benchmark. These estimates have generally been satisfactory at the national level, but significant discrepancies have been noted in the estimates for certain kinds of business at the **provincial** level when they were compared to the data obtained from the 1966 Census of Merchandising.

It is evident that the sample design presently in use is not producing sufficiently reliable estimates for selected kinds of business at the provincial level. In addition, we have known for some time that the time-lag (12-16 months) in adjusting the sample estimates to take into account the effect of births and deaths in the retail universe has had a deleterious effect on the reliability of the current retail trade estimates.

Consequently, it was decided to develop a new sample design and processing system which could, hopefully, eliminate many of the drawbacks of the present survey. In October 1968, work on the design of a new monthly retail trade survey commenced.

---

* Mr. Snyder is Director of the Merchandising and Services Division, DBS. This paper was prepared for the Seventh Federal-Provincial Conference on Economic Statistics, Banff, Alberta, May 19-23, 1970.

The proposed design is basically a simple one at employs a list frame (from which a sample is rawn) supplemented with an area sample. The asic purpose of the area sample is to pick up re-il outlets with 0-employees, as well as those hich may not appear on the list. It may be of terest to note that the principal component of the oposed list frame is the Employment Survey mailing st. In addition, lists of retail stores are available om our shopping centre and chain store surveys, hich are covered completely on an annual basis. his frame has been selected in preference to the 966 Census of Merchandising list principally be-use the ES lists are updated continuously whereas e census is not. This is an important feature be-use the universe of retail stores is a mobile one; any outlets go out of business, come into business change addresses.

Initially, the sample (from both the list and ea frames) will be nonrotating. However, when sults are obtained and analyzed and the system working smoothly, rotation will be definitely nsidered. Through rotation, a lower non-response te can be anticipated and through rotation of the ea sample, it should be possible to reduce the as in the estimates for births and deaths by re-cing the time lag in revisiting areas.

Since the proposed sample design represents radical departure from the type of design used in e past, progress has been somewhat slower than pected. We are now cautiously optimistic that the w design, having been tested and "debugged", ill be operational by January 1971. However, a bstantial amount of work must still be completed fore that date if our time schedule is to be met.

It is expected that the new sample will yield e following results:

It should improve substantially the quality of the published retail trade estimates, through increased coverage at the kind of business level, improved methods for estimating non-response and an almost immediate adjustment for store births and deaths.

The new system will make possible an increase in the number of retail kinds of business for which data can be published each month at the provincial and Canada levels. (At the present time, the Dominion Bureau of Statistics publishes monthly estimates for 18 kinds of business. The new survey will allow for the publication of data for 24 classifications at the S.I.C. 3-digit level and up to 35 detailed kinds of business.)

The new survey will provide monthly sales estimates by detailed kinds of business not only for the ten provinces, as in the past, but will allow for the production of data for the Yukon and Northwest Territories—which until now have been included in the British Columbia estimates—and four metropolitan areas, i.e., Montreal, Toronto, Winnipeg, and Vancouver. It is hoped that, in time, the number of metropolitan areas for which monthly sales data can be published will be expanded. This will depend on the experience gained from measuring the retail store volume in the four metropolitan areas.

Because of the much larger sample size to be used in the new survey (approximately 25,000 firms as compared with 14,000 at present), plans are also being made to process an "early" estimate of total retail sales in Canada and by province approximately three weeks after the survey month. These plans will be tested thoroughly during the next several months.

In order to acquaint users with the details of the proposed survey, it is planned to prepare a paper describing the sample design, methodology, publication format, etc., by the end of the year. Anyone wishing to obtain a copy of this paper should contact the Director, Merchandising and Services Division, DBS, Ottawa.

Plans for the 1971 Census of Merchandising and Service Establishments

Currently, the Division is well into the planning stages for the 1971 Census of Merchandising and Service Establishments. This census will be a major survey with considerably greater industrial coverage and much more detail than was the case for the 1966 Census. The actual planning began in April 1969, with the creation of a committee made up of representatives of all the major internal DBS users of merchandising statistics. The committee has, as of this date, completed a review of the concepts and definitions to be employed in the Census, including an exhaustive study of the S.I.C. groups and the detailed kinds of business classifications in retail trade, wholesale trade and service trades. The recommendations of the committee were circulated for comment to various DBS divisions, the ten provincial governments and a large number of trade associations. Suggested changes or modifications to the committee's preliminary draft were studied and alterations made wherever necessary.

The committee is presently engaged in assessing the types of data required from the 1971 Census of Merchandising and Service Establishments. At present, discussions are primarily centered on the statistical needs of the secondary users of data within DBS—National Accounts, Input-Output, Real Output and Regional Statistics. The committee will, of course, give high priority as well to the needs of users in the private sector and of other government agencies at all levels. The committee's recommendations regarding questionnaire content will be circulated shortly to internal DBS users, to the private sector and to various provincial statistical and economic planning agencies for their appraisal and comment.

During the planning stage, the committee has been guided by three principal objectives: (1) improved quality of data output; (2) increased coverage and detail especially in the service area; and (3) improved timeliness in the release of data.

It is undeniably true that the statistical output produced by the Bureau is being used to a greater extent than ever before. The business community, urbanologists and governments at all levels require more timely and better quality data in order to reach the best possible decisions. The results of the censuses of distribution are of value not only for the detailed information actually produced at a certain point in time but also because the results serve as a benchmark for many of the current surveys undertaken by the Bureau. However, even though there is a natural desire on the part of users to employ a census as the vehicle for the collection of a wide variety of data, the demands for data from all sources must be considered in the light of the burden they would place on respondents, the implications on the Bureau's resources and, above all, their effect on timeliness and quality.

Our present plans call for a heavily automated collection and editing programme for the 1971 Census, making full use of modern technology which has given us the tools to process information at a much faster rate and with greater accuracy than ever before possible. However, to reap the benefits of mechanization, it will be necessary to allow for much greater lead-time and considerably more planning efforts than in the past. Also, it is already evident that automation requires a much higher grade of human resources and, therefore, the demand for improved quality and timeliness will, in all likelihood (certainly for "one-shot" jobs such as the Census), involve higher costs than for similar projects undertaken in the past.

It might be of some interest to note that our present plans for the 1971 Census of Merchandising and Service Establishments call for a major effort in improving the quality of the data published on the service and wholesaling sectors of the economy. For example, many gaps existing in the collection of data on services to business management, such as engineers, lawyers, etc., are to be eliminated.

In addition, the collection and publication of data on wholesale trade are to be substantially improved. We have already pinpointed a number of the factors that have contributed to the substantial delay in the publication of wholesale trade statistics collected from the 1966 Census, e.g., lack of manpower resources, conceptual and classification problems, etc. It is anticipated that most, if not all, of these problems will be eliminated for the 1971 Census.

Service Trades

In a relatively affluent country such as Canada, the service sector of the economy plays a significant role in terms of both consumer expenditure and as a source for employment. For example, in 1966, household consumers and business firms spent close to $4.5 billion on a variety of services and over 480,000 persons were employed in the service trades. These totals would have been higher if **all** commercial services had been surveyed; much of this area, however, is still unexplored. Although DBS has made some headway in developing statistical series in the service sector – restaurants are covered monthly, hotels, advertising agencies, laundries and dry cleaners, motion picture theatres and film production annually, and funeral directors quinquennially – a major effort in developing current data in the service area has been thwarted, in the past, by a constant lack of professional and clerical resources. Because of the demand for such data from governmental agencies, such as the Bank of Canada, Economic Council of Canada, internal DBS users, academicians and others, the Bureau has given a high priority to the development of a long-range programme for the production and publication of more comprehensive and timely statistical information in these areas.

As a first step in this programme, the Bureau's Merchandising and Services Division is expanding the data available on accommodation (tourist and transient) in Canada. DBS is working closely with the Office of Tourism, Department of Industry, Trade and Commerce, as well as with provincial tourist bureaux and various national and provincial tourist and hotel associations, in developing more comprehensive statistical information for this industry. For the year 1969, the hotel survey is being expanded to cover motels, tourist cabins, tourist camping grounds, hunting and fishing camps, recreation camps and tourist homes. Not only is the coverage to be expanded in this industry, but an exhaustive review of the data needs of users of accommodation statistics is presently being undertaken. It is expected that this review will indicate the need for a major change in the types of data which have been collected and published in the past for this industry.

Concurrent with this expansion of the accommodation survey is a study of the means by which improvements can be made in the statistical series on restaurants. One of the most rapid growth areas within the service sector has been the food-serving industry – particularly in the "fast-food" area, such as drive-in restaurants, take-out restaurants, etc. It is probable that our present sample of restaurants is not sufficiently viable for estimating the rapid upward growth in this area. It is hoped that the new sample for the restaurant group – which will be processed in conjunction with the new retail trade survey – will be operative by January 1971.

During 1971, the first survey of franchising in the accommodation and foodservice industries will be undertaken, covering the year 1970. This survey ties in with the need to develop a more adequate information base in these industries, areas where franchising has been gaining rapid acceptance. The survey will also meet the increasing demand for such data from the business community and market researchers.

Our present plans are that the survey on franchising in the service trades will be undertaken every three to four years.

(Continued on page 105)

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and other government investment income. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitary smoothing of crop production and standard seasonal adjustment for with-drawls of grain from farm stocks and the change in other farm-held inventories. Because of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. **Source: National Income and Expenditure Accounts, First Quarter 1970 (D. B. S. 13-001).**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings. [4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) [5] See footnote 4, Table 1.1 **Source: National Income and Expenditure Accounts, First Quarter 1970 (D. B. S. 13-001).**

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars y the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected y compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in he implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

ource: National Income and Expenditure Accounts, First Quarter 1970 (D. B. S. 13-001).

Table 2.1: Real domestic product, by industry of origin, volume indexes (1961 = 100) based on the 1960 standard industrial classification

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and other short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between direct measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown for the first quarter 1970. SOR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), D. B. S.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D. B. S.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

Table 12: employment indexes,[1] by industrial division (1961 = 100), based on the 1960 standard industrial classification

monthly averages or months	industrial composite[2]	forestry	mining, including milling	manufacturing			construction	transportation, communication and other utilities[3]	trade		finance, insurance and real estate	service[4]

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service **Source: Employment and Average Weekly Wages and Salaries, (72-002), D. B. S.**

[1] See footnote 1 and source in Table 12. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. They **cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review.** **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 2: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

monthly averages or months	total shipments	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), D. B. S.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] From January 1970 passenger cars financed for business purposes have been excluded from the numbers shown in his series. [3] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost o purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, mports (65-007), Exports (65-004), and Credit Statistics (61-004) D.B.S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities, does not include imports. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1]The data are collected for 1,400 municipalities and individual figures are available on request. [2]Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D. B. S.**

---

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D. B. S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are ased on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total alue of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above able covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D. B. S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. [3] Excl. of NFLD. Western grain prices used in the construction of the Index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 1969, equal in value to 100 lbs. of Index 100 live hog. [5] Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective January 1969, as a % of the price of 100 lbs. live hog, Index 100. [6] Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. [7] Quotations refer to steers all weights. [8] Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1]Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. roduction is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3]Includes aking and frying oils and fats. [4]Includes stocks held by manufacturers and other warehouses. [5]Includes fresh sausage, frankfurters, weiners and all other sausage. ncludes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of produc-on will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** uarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Produc-on of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. ---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), D. B. S.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968, 1969 and 1970 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

---

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly servic credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See also **Credit Statistics (61-004)**. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [4] Personal cash loans of up to $1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usually repaid in instalments. Amounts shown include interest and other unearned income finance charges. [6] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. [7] Starting with January 1970, the sales finance companies component of consumer credit has been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. **Sources: Credit Statistics (61-004), D.B.S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculate separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most importa are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade** Canada, Exports (65-004), D. B. S.

[1] Column numbers refer to tables 3 and 4, section 11. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), D. B. S.**

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in thi table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United State railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carrier: only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services ar included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are total for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002 monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1]Monthly averages for years 1967 and 1968 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2]Prior to 1970, ures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. These groups covered all air carriers with gross annual ing revenues of over $100,000 prior to January 1969 and over $150,000 during 1969. Figures for 1970 include only the operations of the seven largest airlines in nada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-) normally account for approximately 95 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [3]United States and other foreign rriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4]Cargo includes air freight and express but excludes mail d excess baggage. **Source: Civil Aviation (51-001), D.B.S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver- s of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and vided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of ada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. luding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does n include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements mad under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercia Failures (61-002) Quarterly, D. B. S.**

(Continued from page 6)

During 1971-72 and 1972-73, the major effort, aside from those activities mentioned above, will be devoted to the planning and carry through of the 1971 Census of Service Establishments. As mentioned previously, it is our intention to substantially improve the coverage and quality of census data in the services industries. This will be done through more careful planning than has previously been possible and through the development of more accurate mailing lists in those areas where under-enumeration has occurred in the past.

Once the major effort required for the 1971 Census of Service Establishments has been completed, the long-term programme directed towards the development of a comprehensive and current statistical information system in the service sector (which commenced with the surveys of the accommodation and food-serving industries) will be pursued. It is our intention to further expand the existing annual service trade programme to cover all major service trades commencing with the year 1972; however, plans are not sufficiently developed at this stage to indicate the extent of the annual coverage. The experience gained in the course of this programme will enable the Bureau to resolve any problems which may arise in development of a monthly series in the service trades, using an approach similar to that taken in the case of retail trade. It is hoped that a monthly series in the service area can become operative by January 1974 at the latest. (As in the case of the annual surveys, it is still somewhat premature to indicate those services which will be published on a monthly basis.)

Inventory Statistics

The Dominion Bureau of Statistics is acutely aware of certain deficiencies in the publication of inventory statistics at the retail and wholesale levels. As in the United States, the quality of business inventory data in Canada has provided some cause for concern. At the present time, reasonably good inventory data are supplied by department stores and retail chain organizations and the results are published monthly in conjunction with the sales estimates. The same may be said of inventory data for wholesalers proper. However, the type of inventory data collected from medium and small-sized firms is of so poor a quality that the figures are not released publicly. Rather, whatever limited inventory data are collected on a monthly basis are supplied to the National Accounts for internal use only.

A major effort is now being planned to improve the quality, coverage and timeliness of retail and wholesale inventory data. It is our intention, for example, to study the feasibility of employing the new retail trade sample as the frame from which to draw a sub-sample which can be used to obtain inventory data from retailers on a quarterly basis. Since the new sample will not actually undergo testing until the summer of 1970, and will require several months of work until most problems have been eliminated, it would appear unlikely that any substantial improvement in our retail inventory series will be realized until mid-1971.

Consumer Credit

During the next year or so, plans will be developed to improve substantially the quality of data on credit outstanding on the books of retail stores. As with the inventory series, a sub-sample – utilizing the new retail trade sample as the frame – will be designed for use in the collection of credit statistics.

In addition, the Bureau is engaged in an exhaustive review of the whole field of consumer credit. At the present time, our consumer credit series is limited to credit granted for the purchase of consumer goods and personal loans. The only exception is the data collected on credit outstanding through the use of oil company credit cards.

In the past, the Bureau has attempted to distinguish carefully between the various types of credit, i.e., "consumer goods" credit, "personal" or "unsecured" cash loans, and "service" credit. However, the increasingly widespread usage of the "all-purpose" credit card, such as American Express, Carte Blanche, and Diners Club, as well as the rapid growth of consumer expenditures in the service area, necessitate a thorough re-examination of our concepts in the area of consumer credit. It is anticipated that some of the newer forms of credit, i.e., "fly now – pay later" travel plans, will pose conceptual problems; however, it is hoped that these can be resolved and necessary changes made in our credit series by January 1972.

Commodity Survey

In North America, and to a lesser extent in Europe, there has been a continuing trend toward "scrambled merchandising" in the field of distribution. The term "scrambled merchandising" refers to the tendency of limited-line retail outlets to broaden their offerings by taking on additional product classes, i.e., garages now sell a large and increasing variety of non-petroleum products, ranging from garden utensils to hardware items. And the trend is not confined to limited line outlets; for example, department stores sell a fantastic array of commodities ranging from clothing to white and brown goods – and the rate of proliferation in these commodity lines has grown with every passing day.

This trend toward scrambled merchandising is true of the majority of retailing businesses today. In a sense, therefore, our present approach in measuring sales by detailed kinds of business becomes less and less meaningful as the tendency to scrambled merchandising continues. For practical purposes, however, a survey taken at the kind of business (or "activity") level lends itself to easier collection on a current basis and the results can quite readily be stratified into small geographic regions. Our experience has been that a retail store can fairly easily supply **total** sales but details of sales by **kind of commodity sold** are much more difficult to obtain.

Nevertheless, information on sales by broad commodity lines is essential, even if it is made available at less frequent intervals than sales by kind of business. There has been an increasing demand for this type of detail not only by the private sector – manufacturers, merchandisers, market research agencies – but by governments as well. In the past, information on retail sales by commodity lines were obtained as part of the Decennial Census of Distribution – 1930, 1941, 1951 and 1961. Because of increasingly rapid changes in the commodity mix within the retail store universe, a ten-year gap between surveys was found to be much too long a time span to properly serve the needs of users.

Consequently, DBS now undertakes a commodity survey every five years, planned for the non-census years 1968, 1973, etc., in order to avoid any possible delay in the collection and tabulation of Census data. As part of this program, questions relating to sales by commodities (other than the detail necessary for classification purposes) were eliminated from the census questionnaire for 1966 and, as planned, for 1971.

The first quinquennial commodity survey was carried out for the year 1968, by means of a sample survey covering approximately 20,000 retailers. Almost all chain and department store organizations were included in the sample frame, together with a lesser proportion of medium-sized firms and a considerably smaller proportion of small independent stores.

It is now realized that even a five-year time span in the collection of such data is too great under present-day business conditions. It has, therefore, been decided, given adequate resources, to carry out the commodity survey every second or third year, commencing with the 1973 effort. (The schedule will be staggered to avoid any interference with the Census timing.) In the interval, efforts will be made to improve the sample design and tabulation methods, in order to avoid a number of problems which came to light following the 1968 survey.

Other Planned Developments

(a) Monograph – Trends in Canadian Marketing

In December 1967, the Dominion Bureau of Statistics released a monograph – one of a number commissioned following the 1961 Census – entitled "Trends in Canadian Marketing". This monograph attempted to identify and explain long-run changes in Canada's distributive system, using as its basis the results from the Decennial Census of Distribution from 1930 to 1961, and supplemented by other data wherever possible. As this monograph was very favourably received, tentative plans are being prepared to up-date this material after each census in order to describe, on a more current basis, changes in the distributional pattern.

(b) Special Study – The Economic Effects of Suburban Shopping Centres on the Central Business Districts of Canadian Cities

The Merchandising and Services Division of DBS has recently begun a study aimed at measuring and comparing the trends of retail activities in the central business districts of large Canadian cities with those taking place in the suburban areas of these cities and to assess the effect of planned shopping centres on merchandising activity within the "core" areas. The study is designed to be of help to local governments, provincial boards, city planners, real estate developers, retailers and others.

This study will utilize data wherever available, in particular the following:

Retail sales, with special reference to population trends.

Market share trends of various segments of metropolitan areas.

Cost factor trends in terms of land value rents, taxes, wages and salaries.

Capital expenditures in building and renovations.

Environmental factors such as population and family formation trends, automobile population, road construction, parking facilities and public transportation.

Initially, it is intended to use Toronto and Ottawa as the two test areas. On the basis of the study of these two areas, a decision will be made on (1) the periodicity of this type of study and (2) expansion of the study to cover other areas as well.

It is expected that some preliminary results from this study should be available by mid-summer 1970.

(c) Operating Results Survey

It is apparent that there is a definite need for improved current data on operating results in the merchandising and services field. It is planned to begin in 1971-72, for 1970, a series of operating results surveys covering retail, wholesale and service trades on a staggered basis. However, it is difficult at this time to state categorically what form the operating surveys will take. If the Dominion Bureau of Statistics is successful in obtaining permission to use the National Revenue administrative records, it may not be necessary to contact the respondents directly for this type of information. Additionally, if such permission is granted, this would enable the Bureau to cover wider areas of the merchandising and services sector in any one year. If a mailed survey is necessary, the coverage will have to be restricted to selected kinds of business within the three sectors in view of our limited resources.

(d) Market Research Handbook

Following each census since 1931, the Dominion Bureau of Statistics has published a Market Research Handbook. The basic purpose of this reference book has been to provide a convenient and broad source of information for all those who are engaged in analyzing the many aspects of Canadian markets on the local, provincial, regional and national levels.

The change in the periodicity of the Census of Merchandising and Service Establishments from decennial to quinquennial opened up the possibility of publishing such a handbook every five years rather than every ten years as in the past. This prospect led to the undertaking of a new Market Research Handbook in 1969, following release of 1966 Census results.

Before proceeding with this edition of the Market Research Handbook, the Merchandising and Services Division contacted a number of marketing research consultants and others in private organizations for their opinions about the previous editions and for suggestions on possible improvements. As a result, the scope of the 1969 edition of the Market Research Handbook has been greatly expanded so that it now represents a "new" publication in more than one sense.

An important principle which emerged from this exchange of views was that the new handbook should not only show data collected during the latest economic and population censuses (in this case, for 1966) but also provide marketing information selected from a number of intercensal surveys. The inclusion of current survey data for 1967 and 1968 makes the new Market Research Handbook not only more complete but also more up-to-date.

Unfortunately, due to circumstances beyond our control, the 1969 edition of the Market Research Handbook encountered delays in typesetting and printing which caused a postponement of approximately one year in the scheduled release date. It is hoped that subsequent editions of the Handbook will be published within a year of the release of the results of an economic census. We tentatively plan to publish the next Handbook during the 1973-74 fiscal year.

Conclusion

In the preceding pages, we have attempted to outline a number of the more significant developments that are presently taking place or will take place in the area of merchandising and services statistics. Not touched upon in any detail, but equally as important, is the major effort being made by the Dominion Bureau of Statistics in the area of timeliness — primarily through the use of automation — and in improvements in the quality of the released data.

Substantial improvements in timeliness in the publication of data will require not only the cooperation of respondents but also the more effective coordination of the work functions within the Dominion Bureau of Statistics — forms design, data processing, typing, translation and printing. For most surveys, all of these functions must be undertaken before the results can be released.

At the same time, greater attention must be given to increasing the respondent's awareness of the need for the data which he is requested to submit. It has been found that some types of public relations efforts have substantially helped to stabilize the level of non-response at a more or less acceptable level.

Improvements in the quality of data produced are also being pursued vigorously. Improved quality control checks and more precise methods in the machine edit of incoming questionnaires will enable the Bureau to isolate and solve serious problems within acceptable time limits.

CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française, Revue Statistique du Canada, nº du catalogue 11–003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of the Dominion Bureau of Statistics. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Satistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 3, Tables 1.1-1.9 — National Income and Expenditure Accounts

It will be recalled that during August 1969, a summary report containing revised annual estimates of the historical revision of the National Income and Expenditure Accounts was published. As revised quarterly estimates were not available at that time, the publication (Catalogue No. 13-001) of the second, third and fourth quarters of 1969 were released with interim estimates on the revised basis for the three main tables of Gross National Product, Gross National Expenditure, and Gross National Expenditure Constant (1961) dollars. Consequently, the *Canadian Statistical Review* contained only three tables from January to August 1970.

Commencing with this issue, temporarily discontinued tables of quarterly National Income and Expenditure Accounts are reintroduced. This change involves, besides discontinuing the interim arrangement of publishing only three main tables of Gross National Product, Gross National Expenditure, and Gross National Expenditure Constant (1961) dollars, combination of government revenue and expenditure tables into one table (Table 1.7) showing more details, and introduction of two additional tables which contain implicit price indexes of Gross National Expenditure (Table 1.8) and Relation between Gross National Product at market prices and Gross Domestic Product at factor cost (Table 1.9).

A complete set of the historical quarterly series for all tables covering the period from 1947 First Quarter onwards is now available in computer printout form and it will be mailed to users on request.

By the end of this year, a new publication of the historical annual series from 1926 containing about 60 tables is expected to be released.

Section 3, Table 3.1 — Financial Flows Matrix

The National Income and Expenditure Accounts revisions result in conceptual and statistical changes to the Financial Flows Accounts. Revised data are not comparable with those of earlier periods which do not reflect these changes. For detail of these revisions see "National Income and Expenditure Accounts 1926-1968". This issue of the CSR includes the revisions of the National Income and Expenditure Accounts for the years 1968 and 1969 and the first quarter, 1970.

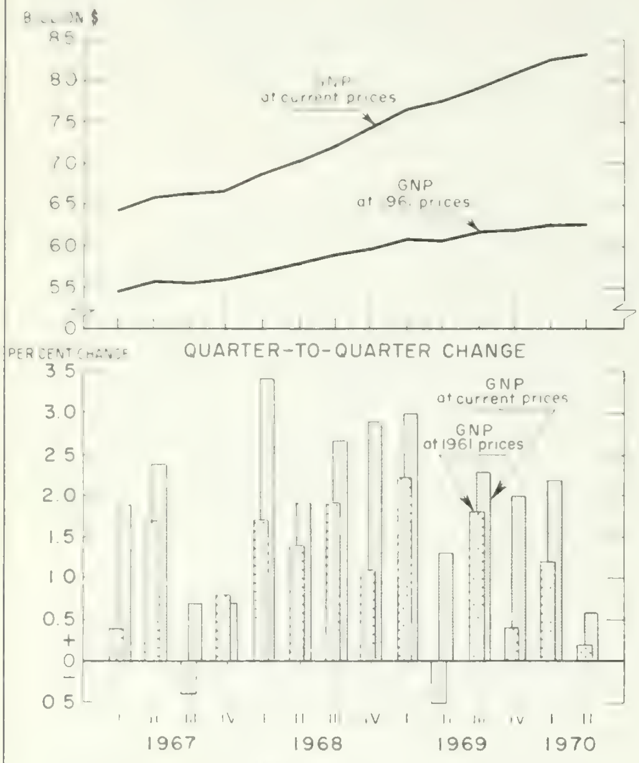
Section 3, Table 4.3 — Canadian Balance of International Payments

The "total" column for foreign securities has been deleted.

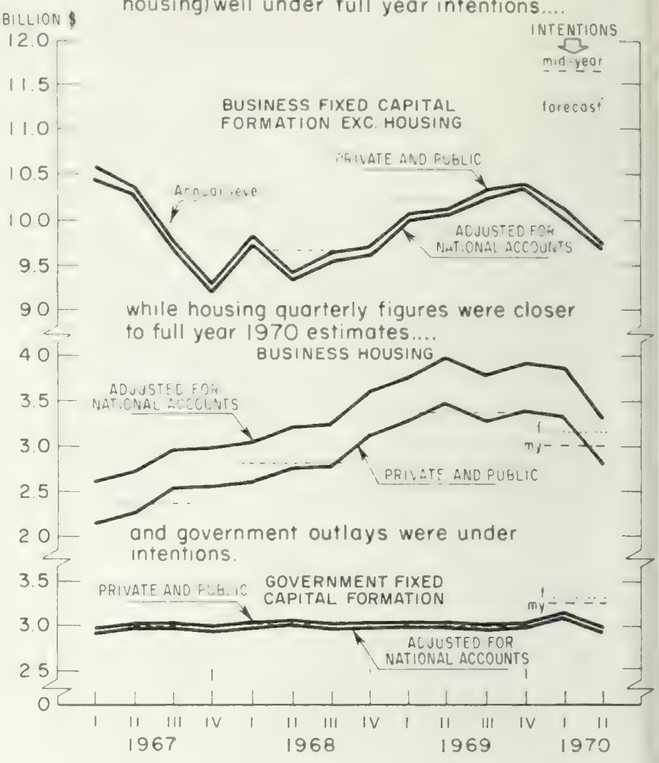
Section 5, Table 3 — Other Wholesale Price Indexes

Revised figures for building material indexes up to and including May, 1970 will be published in the October issue of the CSR.

In the second quarter G.N.P. rose 0.6 per cent at current prices and 0.2 per cent in real terms.



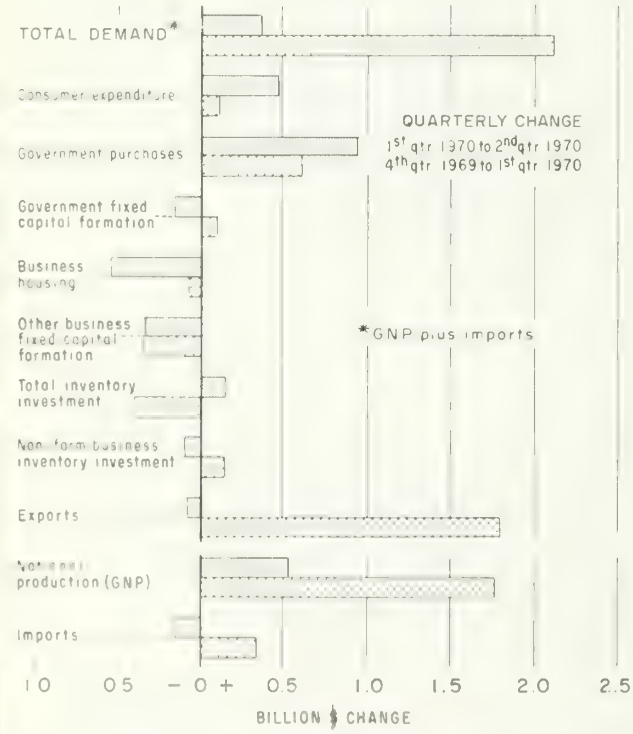
Lower second quarter non-residential construction and a further fall in machinery and equipment investment pulled business fixed capital (excluding housing) well under full year intentions....



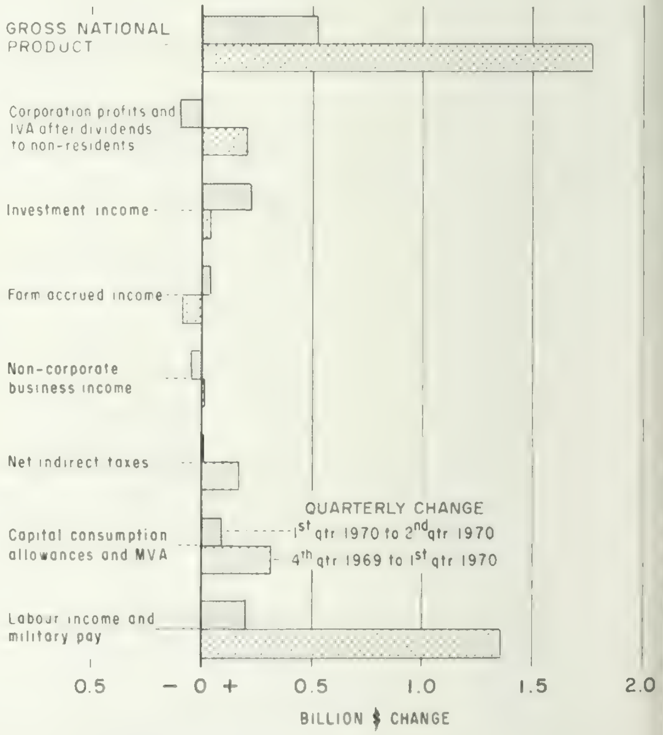
while housing quarterly figures were closer to full year 1970 estimates....

and government outlays were under intentions.

Total demand rose $0.4 billion or 0.4 per cent, spurred by consumer and government purchases. The gain in the previous quarter was 2.1 per cent



The slower rise in G.N.P. was accompanied by a drop in corporation profits and a deceleration in labour income.



ALL DATA SEASONALLY ADJUSTED AT ANNUAL RATES

NATIONAL INCOME AND EXPENDITURE ACCOUNTS SECOND QUARTER, 1970

Widespread easing of economic activity, accompanied by reduced inflationary pressure and a sharp increase in the unemployment rate characterized the spring quarter. This is the picture emerging from a reading of the preliminary estimates of the National Income and Expenditure Accounts prepared on the recently adopted accelerated schedule.

Gross National Product at market prices rose by 0.6 per cent to reach 83.2 billion dollars, seasonally adjusted at annual rates, compared with an increase of 2.2 per cent in the first quarter. The implicit price deflator rose by 0.5 per cent, compared with 1.0 per cent in the first quarter and with 1.6 per cent in the final quarter of 1969. After allowing for the price change, the volume of physical production rose by a marginal 0.2 per cent.

The current slowdown, which amounts to a virtual standstill in constant dollar terms, appears abrupt coming in the wake of large current and constant dollar gains in the first quarter. The first quarter strength was centered in an unusual rise in exports to overseas countries, apparently the result of a number of temporary influences. This tended to obscure the effect of developing weaknesses in consumer expenditure and investment spending. These weaknesses continued in the second quarter and, in the absence of a further significant boost in exports, resulted in a sharply reduced expansion in the aggregate value of production.

It is interesting to note that in contrast to GNP in constant dollars, domestic demand in real terms fell in the first quarter and rose marginally in the second, thus displaying movements in line with the trend shown by the American economy, where the external sector plays a much smaller role than in Canada. However, one significant difference in the recent performance of the two economies is the fact that subsiding market pressures, in a background of anti-inflationary measures, was accompanied by much clearer evidence of a price slowdown in Canada than in the United States.

Consumer expenditure on goods and services, with a 1.0 per cent increase, rose by $480 million providing one of the few sources of strength in the quarter. Though representing a marked pick-up after the levelling out of the first quarter, the current 1.0 per cent increase is modest compared with the average rate of increase of almost 2 per cent in recent years. The most notable increase was shown by durable goods, where a substantial decline of 11.0 per cent in the first quarter, gave way to a 3.2 per cent increase this quarter; this was mostly accounted for by spending on automobiles, which rose by almost 8 per cent, recovering some of the ground lost in the unusually steep first quarter decline of 22.5 per cent. Restraint in consumer buying is most evident if the first and second quarters are taken together – the increase of 2.4 per cent in the first half year comparing with increases of 4 per cent and over in the three previous half-year periods.

The major support to aggregate demand in the second quarter appears to have originated in the government sector. Tentative estimates of current government expenditure on goods and services show an increase of $952 million or 6.3 per cent. The bulk of the increase occurred in federal (non-defence) and provincial spending. Capital expenditures of governments, on the other hand, fell by $148 million.

Declining investment spending was a major factor in the slowing in economic activity. Business gross fixed capital formation, which had already declined by 2.9 per cent in the first quarter, fell again, this time by a more substantial 6.3 per cent. Declines occurred in all three major types of fixed capital formation. The drop in housing reflected the marked slowdown in the number of new starts in recent months; in non-residential construction the fall was associated with prolonged work stoppages which caused a record number of man hours lost in the construction industry this quarter. The mid-year survey of business intentions shows an anticipated increase for the year of about 8 per cent, which increases slightly the intentions reported at the beginning of the year. Business capital formation for the first half of the year runs approximately 11 per cent below these expectations making their complete realization improbable, even if some upturn occurs in the remaining quarters.

The high level of merchandise exports realized in the first quarter was maintained and even increased slightly in the second quarter. Shipments to the United States increased a little, while exports to overseas countries eased somewhat, after rising by a spectacular 38 per cent in the previous period. In line with weak domestic demand, especially in capital formation, imports continued to display sluggishness, falling marginally for a second consecutive quarter. There was a slight narrowing of the deficit in the services account, partly attributable to lower interest and dividend payments. The unusual and sizeable overall surplus balance on transactions in goods and services with non-residents shown in the first quarter rose by $76 million in the second quarter to reach a level of $928 million.

The reduced rate of expansion was mirrored on the income side by a sharp deceleration in labour income, which rose by only 0.4 per cent compared with 3.1 per cent in the first quarter and with rates of over 2 per cent in the previous few years. The current increase is the smallest shown since the first quarter of 1961. Decline in employment in the goods-producing industries, especially in the strike-affected construction industry and in manufacturing, appear to have been the major factor behind the current slowdown. The slackening in the labour market is highlighted by the sharp increases in the unemployment rate, up from 4.5 per cent in January to 6.7 per cent in July, though there has been at the same time an unusually rapid growth in the labour force.

Preliminary estimates of corporation profits indicate a fall of 5.3 per cent. This more than cancels the first quarter increase and brings profits back to somewhat below their fourth quarter level. The most notable changes among other income components were shown by accrued farm income, up by 2.4 per cent, and by interest and miscellaneous investment income, which rose by 6.8 per cent.

The softening in income growth, particularly in wages and salaries, had a depressing impact on personal income and on personal disposable income. Personal income rose by 0.6 per cent, compared with usual increases of 2 per cent and over. The deceleration in personal income, concurrent with an increase in income tax collections, led to a fall of 1.0 per cent in personal disposable income — its first decline since the first quarter of 1961.

Price Movements

Price moderation is indicated this quarter by the implicit price deflators of Gross National Expenditure, except government. Even though implicit price indexes reflect changing spending patterns as well as price movements of individual goods and services and are therefore not strictly comparable to conventional base-weighted price measures, it is interesting to note that the current slowdown is generally consistent with the evolution of the consumer price index and of most wholesale price indexes in recent months.

The price rise in personal expenditure on goods and services of 0.5 per cent was the lowest in five quarters. Deceleration occurred in all categories of consumer spending, but particularly in durable goods and in services. The implicit price for business gross fixed capital formation slowed to a rate of increase of 0.4 per cent after rises of 1.2 and 1.4 per cent in the previous two quarters. The easing in this index was entirely attributable to marginal declines in the prices of residential and non-residential construction as the price for machinery and equipment accelerated this quarter from 0.8 to 2.1 per cent. The declines shown by construction were caused by a softening in both material and labour cost components. However, statistical methods used in the seasonal adjustment of certain labour series are believed to have been somewhat inadequate this quarter in capturing all the impact of disruptions caused by work stoppages. Consequently, the implied fractionally lower labour cost may be fortuitous and subject to later revisions. The levelling out in the implicit price index of imports may be partly related to the unpegging of the Canadian dollar at the end of May.

Selected Implicit Price Indexes, Seasonally Adjusted

Percentage change from the previous quarter

	1969				1970	
	1Q	2Q	3Q	4Q	1Q	2Q
Personal expenditure on consumer goods and services	0.4	1.0	1.2	1.9	0.9	0.5
Durable goods	– 1.1	1.4	–	1.3	1.1	0.7
Semi-durable goods	0.7	0.4	1.1	1.0	0.1	0.1
Non-durable goods	– 0.7	0.3	1.5	3.5	0.2	0.1
Services	2.1	1.5	1.4	1.0	1.2	0.9
Government current expenditure on goods and services	0.3	3.6	1.5	2.2	0.4	1.7
Business gross fixed capital formation	0.9	1.4	0.6	1.4	1.2	0.4
Residential construction	– 1.3	0.7	0.1	3.3	0.2	– 0.3
Non-residential construction	3.8	0.8	1.4	1.9	1.8	– 0.5
Machinery and equipment	–	1.8	0.8	– 0.3	0.8	2.1
Exports	0.9	0.7	0.3	0.6	0.7	0.5
Imports	0.8	0.4	1.2	1.7	2.4	0.1
Gross National Expenditure	0.8	1.7	0.5	1.6	1.0	0.5
Gross National Expenditure excluding value of physical change in inventories	0.6	1.4	1.1	1.5	0.4	0.8

Note: The application of a more adequate method and the introduction of more recent data in the calculation of implicit price indexes may have caused their quarter-to-quarter movement to differ, in some cases, from the one previously published.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of governmen business enterprises and other government investment income. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes a arbitary smoothing of crop production and standard seasonal adjustment for with-drawls of grain from farm stocks and the change in other farm-held inventories. Becaus of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts, First Quarter 1970 (D. B. S. 13-001).**

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings. [4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) [5] See footnote 4, Table 1.1 **Source: National Income and Expenditure Accounts, First Quarter 1970 (D. B. S. 13-001).**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment insurance. [2] Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968. [3] With- lding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of ies.

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and reen major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar parisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and r short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing erence between direct measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown for the first quarter 1970. SOR's were issued uary 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement.

---

[1]Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2]The labour force as a percentage of the population 14 years of age and over. [3]The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D. B. S.**

[1]See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2]Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the m h. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and p ic administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average W ly Wages and Salaries, (72-002), D. B. S.**

[1] See footnote 1 and source in Table 12. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per ent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. They **annot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 969 issue of the Canadian statistical review.** **Source: Prices and Price Indexes (62-002), D. B. S.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

monthly averages or months	shipments[1]	new orders received during month[3]	unfilled orders at end of month[4]	inventory at end of month						ratio of inventories owned to shipments
				owned[2]	held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders In Manufacturing Industries (31-001), D.B.S.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), D. B. S.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] From January 1970 passenger cars financed for business purposes have been excluded from the numbers shown in th series. [3] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to urchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Im rts (65-007), Exports (65-004), and Credit Statistics (61-004) D.B.S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities, does not include imports. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery oduction (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane comingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove l, kerosena and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a mparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialies, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D. B. S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D. B. S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage de. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan is and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The re- nder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. [3] Excl. of NFLD. Western grain prices used in the construction of the Index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 1969, equal in value to 100 lbs. of Index 100 live hog. [5] Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective January 1969, as a % of the price of 100 lbs. live hog, Index 100. [6] Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. [7] Quotations refer to steers all weights. [8] Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

[1]Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. 'roduction is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3]Includes king and frying oils and fats. [4]Includes stocks held by manufacturers and other warehouses. [5]Includes fresh sausage, frankfurters, weiners and all other sausage. ıcludes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** arterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Produc**n **of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. ---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), D. B. S.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968, 1969 and 1970 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

---

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See also Credit Statistics (61-004). [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [4] Personal cash loans of up to $1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usually repaid in instalments. Amounts shown include interest and other unearned income finance charges. [6] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. [7] Starting with January 1970, the sales finance companies component of consumer credit has been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. **Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), D. B. S.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), D. B. S.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

[1] Includes Class I and Class II carriers only. These are trucking firms having $100, 000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100, 000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [3] Includes Class I carriers only. These are carriers having $100, 000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1967 and 1968 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Prior to 1970, ures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. These groups covered all air carriers with gross annual ing revenues of over $100,000 prior to January 1969 and over $150,000 during 1969. Figures for 1970 include only the operations of the seven largest airlines in nada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-) normally account for approximately 95 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [3] United States and other foreign rriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail d excess baggage. **Source: Civil Aviation (51-001), D.B.S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver- of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and vided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of da Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. luding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base ils" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks uded in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries ept electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. [1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D. B. S.**

Continued from page 6)

The Components of Demand

ersonal Expenditure on Consumer Goods and Services

Consumer expenditure on goods and services dvanced 1.0 per cent to a level of $48,796 million easonally adjusted at annual rates. Although this dvance was considerably greater than the 0.3 per ent increase registered in the first quarter, it was elow the increases recorded throughout 1968 and 969. The quarter was marked by a partial recovery f expenditure on automobiles from its first quarter lump and a slowing of consumer expenditure on ervices.

Durable goods advanced by 3.2 per cent after an 1.0 decline in the first quarter. The reversal in irection was caused primarily by a 25.0 per cent ecline in purchases of new cars in the first quarter ollowed by an 11.3 per cent increase. Even taking he advance into account the level of sales was ubstantially below those recorded in 1968 and 1969. he only other durable component to register an inrease was home appliances that rose by only 1.1 er cent. Expenditure on furniture, fixtures, and oor coverings; and recreation equipment declined y 1.2 and 1.6 per cent, respectively.

Semi-durables advanced by 1.1 per cent. Exenditure on semi-durable household supplies, inluding household textile, china, and glassware ncreased markedly. However, this increase was artially offset by a 3.9 per cent decline in personal ccessories. There was also a small increase of .6 per cent in clothing and footwear. Within this roup, expenditure on men's and boys' clothing ncreased by less than 1 per cent while women's nd children's clothing declined at approximately he same rate; footwear on the other hand showed ttle change from the previous quarter.

In the aggregate, non-durables increased only y a marginal 0.1 per cent—the smallest advance n this group since the fourth quarter of 1963. Food, hich accounts for about 40 per cent of total non-urables, registered no change this quarter, after nusually large increases of 3.1 and 3.7 per cent in he two preceding quarters. Among items showing izeable increases were alcoholic beverages and obacco both of which rose by over 3 per cent. Fuel nd utilities also rose nearly 3 per cent, with most f the increase concentrated in electricity, which ose by 10.6 per cent and which was partially offset y declines in gas (8.0 per cent) and other fuel .4 per cent).

Services advanced by 1.3 per cent—the lowest ncrease in this component since the second quarter f 1967. Expenditure on shelter, and personally perated transportation showed the greatest advances .4 and 3.5 per cent, respectively). The service portion of household operation as well as expenditure in restaurants, cafes, and hotels showed no change. Expenditure on recreation and purchased transportation declined.

Gross Fixed Capital Formation

Spending on fixed capital dropped in total by $1,016 million or 6.0 per cent to a level of $15,956 million in the second quarter, with declines of $536 million in housing; $416 million in non-residential construction; and $64 million in machinery and equipment. Both business and government fixed capital formation fell, the former by 6.3 per cent, the latter by 4.8 per cent.

Business non-residential fixed investment (non-residential construction and machinery and equipment) dropped by $332 million, or 3.3 per cent, to a level of $9,688 million. Almost three fourths of this decline was in non-residential construction, which fell by 5.0 per cent. Both building and engineering outlays were affected. The fall in business spending on machinery and equipment of 1.7 per cent was appreciably smaller than the 7.3 per cent decline registered in the previous quarter. Most of the drop in this component was associated with domestic rather than imported supplies.

The decline in business residential housing was very sharp this quarter, down almost 14 per cent compared with a 1.6 per cent decline in the first quarter. This brings current investment in business housing down to $3,312 million—about 17 per cent below the peak rate of $3,980 million realized in the second quarter of 1969. The decline was centered in apartment units; single-family units showed only a modest fall. Notwithstanding federal measures to stimulate activity in the housing sector announced in July, weakness in apartment building may continue further as a result of the diminished backlog of apartments started in 1969 and of the lower rate of starts in the first half of 1970.

Non-farm Business Inventories

Investment in non-farm business inventories declined from a rate of $608 million in the first quarter, seasonally adjusted at annual rates, to a rate of $516 million in the second quarter. As the following table illustrates, the second quarter accumulation was preponderantly at the retail trade level. In terms of types of goods held, investment in non-durables showed a sizeable increase but this was more than offset by a sharp decline in durables.

In manufacturing, inventory investment declined steeply by $612 million, from a $452 million accumulation last quarter to a liquidation of $160 million this quarter. Within total manufacturing, durables showed a sharp turnaround from an accumulation of $268 million to a liquidation of $172 million and

Retail trade	– 96	552
Total manufacturing and trade	512	424
Durable goods	276	12
Non-durable goods	236	412
"Other" industries	96	92
Totals	**608**	**512**

accounted for over two thirds of the decline in investment. Although there was a strong build-up of stocks in primary metal industries, this was more than offset by a large depletion in the wood industry and either depletions or low rates of accumulation in all other manufacturing industries. Investment in non-durables also declined from an accumulation of $184 million last quarter to a marginal one of $12 million this quarter. With factory shipments keeping the same pace as in the previous quarter, the drawing down of manufacturing stocks appears associated with declines in both production and in the backlog of unfilled orders.

In contrast to manufacturing, the $552 million increase in the stocks of retail traders represented one of the largest rates of accumulation in recent years. This build-up, which occurred after liquidation of $16 million in the fourth quarter and of $96 million in the first quarter, consisted of durables and non-durables in about equal proportions. The increase in investment, however, was slightly larger in durables, where all of the advance was due to an unusually large increase in the inventories of motor vehicle dealers after a sizeable liquidation in the first quarter. In non-durables, the most notable accumulations occurred in the stocks of food, drugs, and in stocks of country general stores.

The modest build-up of $32 million in the stocks of wholesale trade compares with rates of accumulation of $156 million in the first quarter and of around $200 million throughout 1969. The current accumulation was the net result of a liquidation of $100 million in durables and of a $132 million accumulation in non-durables.

Exports and Imports of Goods and Services

The balance on Canada's transactions with non-residents for goods and services rose by $76 million to a surplus of $928 million, seasonally adjusted at annual rates, in the second quarter. The improvement in the balance resulted from a gain of $36 million in merchandise trade, and $40 million in non-merchandise trade.

Estimates of merchandise trade were virtually unchanged from the first quarter – exports increasing marginally, and imports decreasing marginally. Exports of automotive products increased along with copper and nickel, aluminum and lumber. Imports of automotive products rose along with food, crude petroleum and chemicals. Industrial machinery imports continued the decline registered in the first quarter.

The main factors in the lower deficit on services were lower payments for interest and dividends and for freight and shipping. Some offset to these occurred in lower receipts on tourist and travel transactions.

On May 31st the Minister of Finance announced that the Canadian dollar would be unpegged from its parity of 92.5 U.S. cents, and allowed to find its level on the foreign exchange markets. The resulting upward valuation of the Canadian dollar, which was experienced following this action, would tend to increase prices of some Canadian exports – while reducing prices of import goods. The net effect of this change is unlikely to have affected significantly levels of trade in the second quarter.

The Government Sector

Total revenues of all levels of government ombined (excluding inter-governmental transfers) ose by just over 3 per cent during the quarter. The ulk of the increase occurred in revenues from peronal direct taxes at both the federal and provincial evels. Revenue from indirect taxes increased somevhat with the increase concentrated at the provinial level; federal revenues from this source showed ittle change as an increase in excise duties was lmost offset by declines in customs import duties nd excise taxes. Corporate tax liabilities fell while here were small changes in the other revenue ources.

Total current expenditures of all governments ose by over 3.5 per cent during the quarter. Most of he increase took place in current expenditure on oods and services, particularly at the federal and rovincial levels. Transfer payments to persons hanged little, the result of offsetting movements t the federal and provincial levels. Federal transers to persons rose with increases in most of the ategories, the largest taking place in unemployment nsurance benefits paid. At the provincial level, rants to post-secondary educational institutions eclined sharply and accounted for the decline in otal.

Government gross capital formation declined by bout 4.5 per cent. Federal and provincial expendiures declined, while those of local governments and ospitals increased slightly.

With total revenues increasing slightly faster han total expenditures, the surplus of the govern nent sector (on a national accounts basis and seasonally adjusted at annual rates) rose from a $1,496 million in the first quarter to $1,600 million in the second. The federal government moved from a small surplus of $12 million in the first quarter to a deficit of $352 million in the second quarter. This was more than offset by an increase in the provincial surplus from $260 million to $488 million, and a movement at the local government level from a deficit of $8 million to a surplus of $192 million.

The Components of Income

Labour Income

The increase of 0.4 per cent in labour income was the smallest recorded since the first quarter of 1961. The current slowdown mostly reflected a decline of 1.5 per cent in the goods-producing industries, compared with increases of over 3 per cent in the two previous quarters. Wages and salaries in the service-producing industries rose by 1.6 per cent, only about half the rate of increase in the first quarter.

Among the goods-producing industries, construction, which was seriously affected by labour disputes, showed an 8.4 per cent decline in wages and salaries. In the two previous quarters, this industry had shown increases of over 6 per cent. The primary industries also declined, by 1.8 per cent. Labour income in this group was pulled down by forestry, whose operations were hampered in British Columbia by a tow-boat strike. Other primary industries showed increases. In particular, mining rose by 2.2 per cent and agriculture by 1.0 per cent. Manufacturing showed a modest rise of 0.6 per cent. The increase was centered in the month of June, which registered a 1.6 per cent rise after remaining practically unchanged for six consecutive months. The upturn in June was partly attributable to an increase in employment in that month after a marked decline in May.

Increases were recorded in all service-producing industries. The service industry rose by 2.2 per cent, with a higher rate of advance in the non-commercial than in the commercial sector. Public administration and defence, excluding military pay, advanced by 2.1 per cent as increases in the provincial and local governments outweighed a decline in federal government. Finance rose by 1.1 per cent; transportation, communication and utilities by 1.6 per cent; and trade by 0.4 per cent. The increases in the two latter groups occurred despite employment declines.

Corporation Profits

Preliminary estimates of corporation profits indicate a drop of 5.3 per cent compared with an increase of 3.3 per cent in the previous quarter. Gross profits, which include charges for depreciation, declined by a lesser 2.8 per cent. Profits started to decline in the second quarter of last year, flattened out at year-end and increased last quarter; this quarter resumes a declining trend, bringing profits to a level of $7,420 million, 9.1 per cent below the peak achieved in the first quarter of 1969. First half-year profits (unadjusted for seasonality) were 6.3 per cent below their level in the first half of 1969.

Net Income of Non-farm Unincorporated Business including Rent

Net income of non-farm unincorporated business including rent declined marginally during the second quarter. Net income in the construction industry decreased, but this was mainly offset by increases in the service industry groupings.

Accrued Net Income of Farm Operators from Farm Production

Accrued net income of farm operators from farm production rose by almost 2.5 per cent during the quarter. A sharp increase occurred in the value of livestock production, the result of a large inventory accumulation, while the estimated value of grain production[1] showed little change. These increases were partially offset by a decline in cash income from the sale of other farm products, notably rapeseed, dairy products and eggs.

Real Domestic Product

Real Domestic Product at factor cost fell by a marginal 0.1 per cent in the second quarter, following a moderate 0.9 per cent increase in the first quarter and a strong advance of 2.0 per cent in the fourth quarter of 1969. Agriculture rose most strongly, by 8.8 per cent; this increase was reflected in higher inventories, particularly of livestock. Excluding agriculture, Real Domestic Product declined by 0.5 per cent.

The goods-producing industries less agriculture declined by 2.1 per cent. Within this grouping, construction exerted the major dampening influence. It declined by 5.6 per cent, largely because of strikes and lockouts. A sizeable 3.0 per cent decline in manufacturing was centered in durables, where transportation equipment was the only industry to register an increase. Mixed movements in non-durables left the index practically unchanged. Among other goods-producing industries, mining fell by 3.0 per cent, after a large increase of 11.9 per cent in the first quarter; forestry fell by 13.5 per cent; and fishing and trapping by 18.3 per cent.

The increase in the service-producing industries of 0.8 per cent was the smallest since the second quarter of 1969. Trade rose by a modest 1.2 per cent, mostly on account of wholesale trade as retail trade rose only marginally. Other service-producing industries rose at rates of around 1 to 1.5 per cent.

---

[1] The estimated new crop production is now based on the preliminary estimates of crop acreages and ten-year average yields. On these assumptions, the value of crop production in 1970 is estimated at $0.8 billion compared with $1.4 billion in 1969.

CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française, Revue Statistique du Canada, n° du catalogue 11–003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of the Dominion Bureau of Statistics. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Satistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

The *MCD*, or *Months for Cyclical Dominance,* in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * * * *

SYMBOLS

The following standard symbols are used in this and other DBS publications:

. .	figures not available
. . .	figures not appropriate or not applicable
–	nil or zero.
—	amount too small to be expressed
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 3, Table 3.1 – Financial Flows Matrix

Supplementary Financial Flows matrices (annual 1968 and 1969 and first quarter 1969) were published in the September 1970 issue of this publication.

Section 3, Tables 4.1, 4.2 and 4.3 – Balance of International Payments

These tables, as is usual in the second quarter of each year, contain revisions to the data for the previous two years.

Section 4, Table 12 – Employment Indexes

Revised seasonally adjusted data on employment indexes for the period January 1961 to December 1969 are now available from the Labour Force Division, DBS. Revisions shown are not reflected in the publication Catalogue No. 72-002 of the month of July.

Section 5, Table 3 – Other Price Indexes

Revised figures are shown for building materials price indexes from 1961 to date. Further details are available in "Prices and Price Indexes", May 1970, Catalogue No. 62-002.

Section 6, Table 16 – New Motor Vehicles

This table has been re-arranged and two series deleted. The series "New passenger cars financed by sales finance companies" was dropped because its significance has substantially diminished in recent years.

"Total supply" has been replaced by the more meaningful series "Total domestic supply" which represents "Production" plus "Imports less re-exports" minus "Exports".

The French version of CANSIM: Operational Manual for Data Entry (Catalogue No. 12-530F, occasional, price $1) is now in printing and should be available in November.

AUTOMATED DATA STORAGE AND RETRIEVAL SYSTEMS

Dr. I.P. Fellegi and Dr. T.J. Vander Noot*

Introduction

Creating machine-readable data bases from survey records is more than merely keypunching or document reading. Machine-readable information is the end product of a long series of processing steps involved in statistical operations. Hence, the automation of survey processing looms as a vital background topic to the central theme of the present article.

Most DBS statistical production already makes use of computers in at least some processing phases. However, as is true in most organizations, it took some years of experience to realize that effective utilization of computers in connection with surveys may require fundamental restructuring of the process.

The computer is more than the hardware equivalent of a host of clerks. Computer processing is a fundamental parameter in the design of surveys if the surveys are to be efficient as a whole. Moreover, where possible, the automation of individual surveys should be planned in the context of other related surveys. Only thus can we spread overheads (such as utilization of central registers) and prepare the ground for the automation of derived major aggregates (for example the National Accounts and indexes of production).

To achieve the full potential of automating a particular phase of processing often requires or assumes the automation of some other phase. Retrieval programs, for instance, require "clean" machine-readable files containing properly edited information, appropriately weighted, correctly identified and coded. Hence the storage and retrieval systems must be planned as part of an automated whole.

The DBS is attempting to develop a comprehensive automation plan. This planning is divided into stages. The first phase (a five-year plan for the Economic Statistics Branch, the Central List of business units and selected surveys in the Financial Statistics Branch) is now almost completed. In attempting to implement this plan (even while working on corresponding plans for other parts of the Bureau), great emphasis will be laid on articulating lessons that are learned as we go along.

The plan identifies five potential major benefits of automation: improvement in timeliness, improvement in accuracy of data, improvement in productivity, provision of machine-readable information for subsequent processing and, last but not least, the creation of data bases from which the information can easily be retrieved. Machine-readable data bases can take two fundamentally different forms. They may either contain aggregate data or individual data (although even in the latter case, of course, the objective is the retrieval of aggregates). Examples of major developments in both of these types of data bases are considered below.

The Canadian Socio-economic Information Management System (CANSIM)

CANSIM is a long-term project which began in 1967 with the objective of creating a large fully automated national data base containing time series at all levels of aggregation. It is being developed in stages, the first of which, now operational, has as its design objective the efficient storage and maintenance of a large number of time series together with a variety of related information: such as title of series, notes, confidentiality pass-words required to retrieve data at different levels of security, date of reference, date of entry, relevant footnotes and publication attributes (whether the figure is preliminary or revised). A detailed description of the system is provided in a paper by Miss Lennox and Dr. Vander Noot in the March 1969 issue of this Review.

The data are hierarchically stored in direct access mode with successive levels of the hierarchy corresponding to successive disaggregations of the time series. This allows for the updating of the various levels of disaggregation at the same time and for the introduction of additional levels of disaggregation; it also facilitates a degree of internal verification.

Users interested in specified time series *per se* can request their retrieval in the so-called "publication format". They will receive a tape or computer printout containing data for the series requested, plus all information necessary for publication of reports by report generating routines. Manuals are available to guide users interested in obtaining data from CANSIM.

At present, CANSIM does not contain manipulative routines operating on the entire data base. However, users who want data for subsequent manipulation can request their retrieval, on tape, in a format which can be read on different types of computers and which can be used in conjunction with independently developed manipulative packages for econometric use.

As of September 1970, CANSIM contains only some 20,000 series but its upper limit for efficient operation on currently available hardware is 1.5 million series. The rate at which series are put into CANSIM is limited by the fact that the preparation of data for input into it from surveys that have not as yet been automated is a time-consuming, manual process.

---

* This article was prepared for the Seventh Federal-Provincial Conference on Economic Statistics, Banff, Alberta — May 19 - 23, 1970 by Dr. I.P. Fellegi, Director of Sampling and Survey Research Staff and Dr. T.J. Vander Noot, Associate Director-General of Operations and Systems Development Branch.

However, even for these surveys, the initial input of historical data is a costly manual operation requiring, in addition to the usual clerical and keypunching resources, professional attention, since the historical data must be "cleaned up", i.e. series must be traced through several publications, breaks must be properly annotated, etc. The automatic edit routines of CANSIM have indicated that the manual editing of the past was inadequate to remove all inconsistencies between series.

Eventually, all or most of the series which could be published by DBS are expected to be included in CANSIM. The level of disaggregation beyond the published detail, however, will be determined largely by demand (and, of course, considerations of confidentiality). However, as in other instances, supply is likely to create its own demand. In its current stage of implementation the benefit of CANSIM to users consists of its capability to retrieve historical as well as current information in machine-readable form and without the need to search through several publications. Much of the stored information will, in fact, consist of unpublished detail. CANSIM is conceived as a central storehouse of time series information containing relevant statistical series produced by other departments as well as DBS.

Work on the next phase of CANSIM has begun. t is concerned mainly with developing a generalized language for direct manipulation of data in the CANSIM base and the development of automated updating routines. Extensive manipulations will be possible by the end of this year. Automated updating routines depend, however, on the general progress of automation in DBS. Eventually, CANSIM may become a general utility with remote terminals in conversational mode and a special computer at its heart.

The development of the software required for he next phase of CANSIM is one of the top priority projects of the Bureau. From a users point of view ts utility will increase with the number of series contained in it and updated. This in turn will depend on the date at which the processing of surveys is utomated.

Even when fully developed, CANSIM will only ontain a small fraction of the aggregates that can e produced from a particular survey. Even though he data stored in CANSIM will be highly disaggreated, going far beyond the published detail, these ggregates are defined in advance and are not apable of further disaggregation. The great adantage of CANSIM is that it will enable users to ace the same aggregate information over time CANSIM is, in fact, organized basically in the time imension).

torage of Individual Survey Data for Subsequent Retrieval of Aggregates

A different type of storage strategy is one hereby the individual data collected in a particular urvey are themselves stored and available for subequent retrieval and aggregation. The advantage of is latter form of data base is that there is no need prejudge what tabulations users may want to obtain from such data bases. On the other hand, the disadvantage of this latter type of strategy is that it is discrete in the time dimension: the data base is a single survey with a single time period as its reference. Also, the confidentiality testing of the retrieved tabulations poses some serious problems.

As mentioned above, one of our design objectives when automating a survey is to ensure that the method of storage and the associated computer software permit the retrieval of custom-made tabulations. The precise nature of the particular form of storage and method of retrieval depends largely on the nature of the survey design. In the case of sample surveys the stored data consists of the content of reports obtained from the selected units (persons, establishments or other units), appropriately edited and corrected.

The storing of the individual sample data by itself is clearly not adequate since the tabulation of aggregates from samples is meaningless without adjustments for non-response and without weighting the sample data to obtain universe totals. Essentially there are two alternative strategies.

The first alternative involves computing weights to be applied to each respondent record. These weights are derived so that they incorporate both the allowance that is to be made for non-response and for the appropriate sample weighting factors. In this case, roughly speaking, computing aggregates consists of the tabulation of respondent data but each unit is counted as many times as its weight indicates. A modification of this method corrects for non-response through the physical duplication of some respondent records (rather than through the adjustment of weights). The essential feature of this procedure is that individual sample units are stored with an attached weight which indicates the number of cases represented by the sampled unit. When this strategy of weighting is employed to fixed form respondent records, it is possible to design user-oriented, flexible retrieval systems.

A second method occurs in connection with more complex survey designs. In this case, the blow-up depends on the characteristics of the particular tabulation. The design of flexible retrieval systems in this case is far more difficult, although not impossible. In fact, an example of a flexible retrieval system of this second kind is provided by our Job Vacancy Survey.

The Job Vacancy Survey[2] involves two methods of data collection – mail and interview. A large sample is selected for each occasion of the Job Vacancy Survey and a questionnaire is mailed to this sample. A subsample of the mail sample is immediately designated for interviewing. The results of the interview survey are used for two purposes; the interviews obtained from cases which responded to the mail survey are used to correct for reporting biases in the mail survey; the interviews obtained from those which did not respond to the mail survey are used to obtain a direct estimate of the number of job vacancies among non-respondents. It is quite clear that the storage problem here is a special one. It is not enough to store the mail survey data but it is also necessary to store the interview survey data. The two are used jointly to derive a single corrected estimate of the number of vacancies in a particular occupation, area, industry or a cross-classification of these. The problem of providing flexible retrieval has, at least for this survey, been solved.

---

[2] *Definitional and Design Aspect of the Canadian Job Vacancy Survey* by S. Ostry and A.B. Sunter, Paper presented at the 37th Session of the International Statistical Institute.

By far the most common situation in current survey practice involves the simpler first alternative. Furthermore, it is impossible to develop a generalized retrieval program capable of operating on any file containing fixed length records with a weight attached to each record (the weight may, of course, be one if the file is based on a 100 per cent enumeration). Such a retrieval program is in the final testing stages in the Bureau. It will be capable of providing a cross-classified tabulation of any specified dimension based on such files. In addition, it will also be capable of including only certain specified kinds of respondents, as defined by users in terms of their reporting characteristics. This retrieval system will be entirely user-oriented in that it will be possible to operate it without programmer intervention on any file which is clean (fully edited). We also have under development and in the final testing stages an equally general edit program capable of checking that the file is "clean" and corresponds to the file declarations (with some limited facilities for correction).

The Geographically Referenced Data Storage and Retrieval System (GRDSR)

Both of the generalized programs mentioned in the section above are part (in fact slight modifications) of a complex geographic storage and retrieval system which is under development for application to the 1971 Census. We now turn to its description.

The population census statistics represent one of the largest stores of information in DBS and it is clearly not possible to anticipate all the needs of users in the regular tabulation programme. Hence, a considerable number of requests have had to be processed through special tabulations. DBS service capability in this respect was limited in the past mostly by two technical factors: (i) the census data, as stored on tape, has been geographically coded to the traditional hierarchy of standard areas: enumeration areas, census tracts, metropolitan areas, etc. Very often the information required by users related to non-standard areas, such as urban renewal areas, school districts, planning zones, etc., and only crude approximations of such areas could be provided; (ii) each tabulation request had to be programmed, tested, corrected, and so on, separately. This resulted in considerable costs and substantial delays.

The so-called Geographically Referenced Data Storage and Retrieval System is being developed in order to remove these limitations. It is not designed to replace the regular census publication programme but rather for user-oriented, custom-made retrieval. While the complete system consists of several subsystems, it is convenient to group these into two major systems: (a) the Geocoding System and (b) the Retrieval System.

(a) The Geocoding System

The objective of the Geocoding System is to assign geographic coordinates to every household enumerated in the census. It would be more correct to say that every household will carry the coordinates of some geographic reference point.

In the major urban areas the reference points will be the mid-points of block faces (a block face being, in general, one side of a city block). Every household will be assigned the coordinates of the mid-point of the block face in which it is located. This process will be largely an automated operation. Underlying this system is a large machine-readable register of block faces, established prior to the census and containing, for each block face, the appropriate street name, the range of house numbers on the block face and the coordinates of its mid-point. The appropriate block face coordinates will be transferred to survey records on the basis of the street address.

Outside the major urban areas the system will be an elementary one. The reference points will be the population centre points of the smallest standard building block areas of the census which typically contain 150 to 200 households each (enumeration areas). The centre point of each of these areas and its coordinates will be determined prior to the census and merged in with the household records after the census.

All programs related to the creation, editing, updating and maintenance of the registers of block faces are operational. The creation of the registers of block faces is well underway in several major metropolitan areas. It is expected that 10 - 12 major metropolitan areas will be coded to block faces (with the remainder of the country coded to the EA level). After the census, and depending on the cooperation of municipalities and on user interest, the coding to block faces may be extended to other cities as well.

(b) The Retrieval System

The geocoding operation results in a census file in which every household carries geographic coordinates. The data will be stored, probably in direct access mode, in the form of a matrix. The matrix will have a hierarchy of rows of which the last three will correspond, respectively, to the block faces (or enumeration areas), households and individuals. The columns will correspond to the data fields of the census: age, sex, labour force status, income, occupation, etc. This arrangement provides great flexibility and efficiency of retrieval, since the data file will be accessed only in the necessary rows (i.e. those block faces which a pre-processing stage

(Continued on page 111)

ABOUR FORCE (More detail in Section 4, Table 3)

TOTAL LABOUR FORCE, TOTAL EMPLOYED, AND UNEMPLOYED DECLINED FROM JULY TO AUGUST. THE UNEMPLOYMENT ATE REMAINED AT 6.7 PER CENT.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of governme business enterprises and other government investment income. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes a arbitary smoothing of crop production and standard seasonal adjustment for with-drawls of grain from farm stocks and the change in other farm-held inventories. Becau of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional pract tioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts, First Quarter 1970 (D. B. S. 13-001).**

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings. [4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) [5] See footnote 4, Table 1.1 **Source: National Income and Expenditure Accounts, First Quarter 1970 (D. B. S. 13-001).**

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

urce: National Income and Expenditure Accounts, First Quarter 1970 (D. B. S. 13-001).

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment nsurance. [2] Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968. [3] Withding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of ies.

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and ween major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar nparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and
er short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing
ference between direct measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown for the first quarter 1970. SOR's were issued
uary 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly
imates of the Canadian Balance of International Payments (67-201 and 67-001), D. B. S.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D. B. S.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the nth. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and plic administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average ekly Wages and Salaries, (72-002), D. B. S.**

[1] See footnote 1 and source in Table 12. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per t, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. They **not be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 9 issue of the Canadian statistical review. Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 2: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

monthly averages or months	total shipments	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), D. B. S.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. **Source: Primary Iron and Steel (41-001), D. B. S.**

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manu-turers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), v Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D. B. S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities, does not include imports. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery duction (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane comgled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a parable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha special-, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D. B. S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D. B. S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage side. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan eas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The re- inder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflec average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. [3] Excl. of NFLD. Western grain prices usec in the construction of the Index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the Index are initial prices only for whea oats and barley. [4] The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 1969, equal in value to 100 lbs. of Index 100 live hog. [5] Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective Januar 1969, as a % of the price of 100 lbs. live hog, Index 100. [6] Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. [7] Quotations refer to steers al weights. [8] Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.
roduction is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes
king and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage.
icludes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of produc-
in will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), D. B. S.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968, 1969 and 1970 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

---

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly servic credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See also **Credit Statistics (61-004)**. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [4] Personal cash loans of up to $1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usually repaid in instalments. Amounts shown include interest and other unearned income finance charges. [6] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. [7] Starting with January 1970, the sales finance companies component of consumer credit has been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. **Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), D. B. S.**

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, bein calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Some series such as General purpose machinery have bee revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now includ oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007)**

[1] Monthly averages for years 1967 and 1968 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Prior to 1970, ures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. These groups covered all air carriers with gross annual ing revenues of over $100,000 prior to January 1969 and over $150,000 during 1969. Figures for 1970 include only the operations of the seven largest airlines in nada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-) normally account for approximately 95 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [3] United States and other foreign riers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail excess baggage. **Source: Civil Aviation (51-001), D.B.S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver-
; of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and
vided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than
year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of
ada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.
luding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base als" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks uded in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries ept electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices Price Indexes (62-002), D. B. S.**

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D. B. S.**

(Continued from page 6)

identified as being within a particular geographic retrieval area) and in the necessary columns (i.e. those data fields which are required for the particular retrieval).

In order to activate the retrieval programme the retrieval area will be delineated on a map in the form of a polygon. The coordinate values of the vertices of the polygon will be determined and introduced into the computer and the reference points (block face or enumeration area centrepoints) contained in the polygon will be calculated automatically.

The tabulation desired for the retrieval area can be described in terms of a generalized retrieval language. The language allows the naming of any of the data fields as well as a number of tabulation options, such as the logical "and", "or", and the "smaller", "greater" and "equal" comparison. All the programs are in the final testing stages. Retrievals of the type indicated in "Storage of Individual Survey Data for Subsequent Retrieval of Aggregates" above can be effected using these facilities.

The retrieval process is designed to be operated without programmer intervention. Technical officers or, in fact, the users themselves should be able to describe their tabulation requirements after a minimum of training. This is expected to result in a reduced turn-around time. The file organization is such that it is not necessary to accumulate (batch) several retrieval requests before it is economically feasible to pass the census files because, in fact, a single retrieval would not necessitate accessing the whole file: only that part which is involved in the retrieval. The economy of retrieval will also be enhanced by the elimination of programming charges.

Although the system is being developed for use in conjunction with the 1971 Census many of its components are designed with much broader applications in mind. The urban geocoding system, for example, operates on addresses whether they originate from the census or other sources; the retrieval programme is capable of operating on any file organized in the matrix form described above, whether or not it is geocoded; and the pre-processor of the retrieval program, which identifies the reference points contained in a given retrieval area, is capable of operating on any geocoded file subject to certain organizational arrangements.

A number of urban municipalities are collaborating with DBS and some of them may implement the geocoding and retrieval systems on their own local records, DBS will provide provinces and municipalities access to these systems in return for their cooperation in producing source documents (basically maps and address ranges by block faces), checking of discrepant information and a continuing supply of update information. In this fashion, DBS hopes to foster the development of an automated, updatable, nationally compatible statistical urban information system.

Interrelation of Data Bases

All of the preceding discussion related either to methods whereby tabulations already prepared can be made more accessible for general use (CANSIM) or to efforts whereby the tabulations that are implicit in individual survey data can be retrieved. These efforts relate to single data bases. What are the technical possibilities and benefit potentials of interrelating different data bases?

Data banks, from a purely technical point of view, have to be organized along some common dimensions. At an aggregate level, of course, CANSIM does already interrelate different data bases, the common dimension being time.

On an individual record basis, the common dimension is generally accepted as the identity of units. Conceptually in order to relate survey data obtained in two different surveys, the surveys would have to apply to the same date since otherwise it would be difficult to interpret information contained in one file but not in the other: this could occur either because the person included in one survey has left the country or died by the time the next survey was taken or, conversely, because persons entered the scope of the survey through one means or another during the time lapse. Further complications might be refusals, or other types of non-response, and incorrect identification coding of persons in either survey. Linkage between sample surveys is complicated even further by the fact that only those units which happened to be included in both samples could possibly be matched (this latter problem could be alleviated if at least one of the two surveys involved would be a census).

Record linkage requires the matching of two records, one in each file. The most economical method of achieving this would be, of course, a unique number identifying the same person in any file. No such number is available in Canada and therefore record linkage will be more expensive. Methodology for linking records on the basis of individual attributes (such as name, address, age, sex, marital status, etc.) exist and have in fact been used occasionally, on an ad hoc basis. Record linkage by this method is used for example, as an important part of the census evaluation program and involves selecting a sample of persons from other files and matching this sample with the census files to determine whether the persons recorded in other files were enumerated in the census. However, this type of matching, as mentioned above, is quite expensive and is used only in very special instances.

The problems mentioned above concerning individuals apply equally to data banks of business units. In addition, there is another dimension. Unlike persons, business units are not always well defined (let alone identified). Even when one intends to collect information from the same business units it is not at all certain that the information actually reported in different surveys relates to the same units. An employment survey, referring to an establishment, and a production survey, also referring to an establishment, is typically not answered by the same person. Each respondent within the establishment reports on the units for which they believe the Statistical Office wants reports. The tracing of the same business units over time presents even more complex conceptual problems. At what point does one cease to consider a business unit as being the same? When a retail store moves down half a block along a street but is owned by the same person and is engaged in the same line of business, is it still the same business unit? If it stays at the same location, maintains the same line of business, but has a different owner, is it still the same business unit? The different kinds of changes and the speed with which they effect our business universe are such as to render record linkage of business units over time an incredibly difficult problem.

Registers

The linkage of data at an individual unit level assumes the existence of an (explicit or implicit) register of units. However, the benefits of registers go far beyond the potential of record linkage. At the present time DBS is developing, as one of its top priority projects, a central register of business units. To discuss this register in detail would go beyond the scope of the present article. It is enough to note here that this register is not being developed for the purpose of record linkage. Its main objectives are: (a) to provide a comprehensive frame for sample surveys and censuses of the business universe; (b) to ensure that, through the joint use of such a register, different surveys can contribute to the quality of coverage embodied in the register for the benefit of all user surveys; (c) to provide a facility for the consistent classification of business units in different surveys; (d) to provide a vehicle through which DBS can keep track of the response load on individual respondents imposed by different surveys; (e) to provide a facility for experimentation with a limited exchange of data between different surveys in order to avoid duplication of collection.

Another register which is maintained in the Bureau is the register of geographic areas included in the Standard Geographic Classification. Typically, the smallest geographical areas identified in this register are municipalities and, in the larger metropolitan areas, census tracts. The register of block faces in urban areas, used in the Geographically Referenced Data Storage and Retrieval System, represents a refinement of the geographical register — a refinement from census tract or municipality level to a block face level. A related development is the imminent introduction by the Post Office of postal delivery area codes. DBS is in close contact with the Post Office in connection with this development to ensure that the smallest areas identified by different postal codes do not cross municipal and, hopefully, census tract boundaries. The postal code areas will represent, once fully introduced, a ready-made refinement throughout the country of the geographic coding system presently maintained in the Bureau.

Another register which is currently being experimented with is a register of urban addresses. An urban address, in contrast with a rural address, is a uniquely identifiable entity (a rural address generally is not unique without the name of the occupant). If a uniform source of update information could be found concerning the change in the stock of urban addresses then, starting with the 1971 Census, a register of them can be maintained. The Central Mortgage and Housing Corporation conducts a survey of all building starts and completions in urban areas. This could be the source of update information concerning additions to the stock of urban addresses. As far as demolitions are concerned, these are hoped to be obtained through a regular (annual or semi-annual) check by postal carriers of the addresses included in the register. A register based on these update sources is presently being developed in five experimental areas. The utility of the effort and the quality of the end result will be assessed after the 1971 Census and a decision will be made on the desirability and feasibility of maintaining a register of urban addresses. Such a register, if it can be developed economically, could be used for a number of purposes: the mailing out of census forms in 1976; the selection of samples for intercensal household surveys (both for national surveys and provincial or municipal surveys); and for the regular tabulation, directly from the register, of new construction and demolition statistics.

Summary

The development of CANSIM represents a major step forward in the direction of automating the retrieval of time-series data. The full benefit of CANSIM will be derived only when the processing of a large proportion of DBS surveys is automated. A major effort is being made to increase the rate of automation during the next 5-6 years.

Important developments are also underway with respect to the development of programs which can tabulate aggregates according to user requests from individual surveys. The automation of individual surveys is also a major prerequisite for the implementation of flexible and economical methods of data retrieval. No major applications of record linkage of individual data are expected although it is used for special purposes where appropriate and possible.

A major effort is underway with respect to registers of business units. An experimental project is currently being carried out with a view to assessing the economy and accuracy of a register of urban addresses.

In closing, a problem of major importance should be emphasized: confidentiality. It has always been one of the fundamental tenets of DBS practice to ensure that no information is disclosed concerning individual respondents. This was a particularly difficult undertaking even when we had to concern ourselves only with "set piece" tabulations. The dimensions of the confidentiality problem, particularly that of residual disclosure, will be of even greater concern since the problem will be increased several fold by the relative ease with which tabulations can be retrieved on the request of users and according to their own specifications.

Revised Price Indexes of Construction Expenditure for GNE Deflation.

Retail Trade, Post-censal Revisions, 1966-1969

CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française, Revue Statistique du Canada, n° du catalogue 11–003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of the Dominion Bureau of Statistics. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Satistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other DBS publications:

. .	figures not available
. . .	figures not appropriate or not applicable
-	nil or zero.
—	amount too small to be expressed
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

LIST OF STATISTICAL TABLES

Page

Section 1. Selected Economic Indicators

1. Labour Force 7
2. Industrial Production 8
3. Employment, Selected Industries 9
4. Income, Earnings and Hours 10
5. Retail Trade, New Motor Vehicle Sales 11
6. Construction 12
7. Exports and Imports 13
8. Selected Monthly Series 14
9. Income and Expenditure Accounts, Balance of International Payments 15
10. Real Domestic Product by Industry of Origin 16
11. Prices 17

Section 2. Population Statistics

1. Population, by Province 18
2. Immigration to Canada, by Country of Last Permanent Residence 18
3. Immigration to Canada, by Province of (Intended) Destination 18
4. Immigration to Canada, by (Intended) Occupational Group 18
5. Births, by Province 19
6. Deaths, by Province 19
7. Marriages, by Province 19

Section 3. System of National Accounts

1. Income and Expenditure Accounts

1.1. National Income and Gross National Product 20
1.2. Gross National Expenditure, Current Dollars 20
1.3. Gross National Expenditure, Constant Dollars 21
1.4. Sources of Personal Income 21
1.5. Disposition of Personal Income 22
1.6. Sources and Disposition of Gross Saving 22
1.7. Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government 23
1.8. Implicit Price Indexes 27
1.9. Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost 27

2. Domestic Product by Industry

2.1. Real Domestic Product by Industry of Origin 28
2.2. Industrial Production 29

3. Financial Accounts

3.1. Financial Flows 34

4. Balance of International Payments

4.1. Canadian Balance of International Payments, Current Account, All Countries 36
4.2. Canadian Balance of International Payments, Current Account, Country Distribution 36
4.3. Canadian Balance of International Payments, Capital Account, All Countries 37

Section 4. Labour

1. Wages and Salaries, by Province 38
2. Wages and Salaries, by Industry 39
3. Labour Force 40
4. Labour Force, by Region 40
5. Employed, by Region 41
6. Employed Non-agriculture, by Region 41

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 6. Tables 1 through 6 – Total Inventories, Shipments and Orders in Manufacturing

These have been revised from 1961 to date.

Section 6, Table 16 – New Motor Vehicle Sales

Revisions to the seasonally adjusted series from 1966 to date reflect the incorporation of new data.

Section 10, Table 6 – Consumer Credit

The 1969 data for "life insurance companies policy loans" and the "sub-total" column have been revised.

REVISED PRICE INDEXES OF CONSTRUCTION EXPENDITURES FOR GNE DEFLATION

Dr. P.S.K. Murty*

I. Introduction

In the recent historical revision of the Canadian National Income and Expenditure Accounts (hereafter called "the Accounts"), several conceptual, structural, statistical, and methodological changes were made.[1] One such change involved the incorporation of approximate adjustments for "productivity" and "gross profit margin" in the revised price indexes used for deflating construction expenditures contained in the gross national expenditure (GNE). The main purpose of this article is to explain how this was done. However, it is important to mention here that this change should not be construed as providing either estimates of "productivity" or of "residual" input which has been inappropriately referred to for some time now as "gross profit". Instead, this change is simply an acknowledgement of the fact that adjustments for "productivity" and "gross profit margin" to the existing price indexes are urgently needed in the context of technological changes that have been taking place over the years. As actual productivity measurements for the construction industry are not yet available, it was necessary to make an initial effort to improve the existing price indexes solely for deflation purposes by using the available data and relevant statistical methods as an interim solution to the problem. By following this procedure, it is well recognized that subsequent research in the matter is needed to make further improvements.

Prior to the historical revision, the price indexes used for deflating construction expenditures were based on composite indexes of wage rates and material prices, unadjusted for changes in productivity and gross profit margin. As construction activity takes place on various sites and produces a wide range of structures which are rarely identical in terms of standard, size, and method of construction, the non-homogeneous character of the structures had been posing problems in collecting price information and compiling price indexes for identical specifications. Therefore, substitute price indexes based on prices of inputs of labour and materials have heretofore been used for deflation purposes. This method assumed that changes in wage rates and materials' prices correspond with changes in prices of final products. This assumption is substantially defective in that it fails to adequately reflect productivity changes of service inputs and of labour and capital used by the construction industry. In particular, the use of material and unadjusted labour prices alone impart a strong upward bias to the price indexes used for deflation.[2]

The above weakness and other problems in the measurement of constant price industry output and final expenditure aggregates in Canada were examined by Emery and Garston of the Bureau in their paper on "The Measurement of Constant Price Aggregates in Canada", and two approaches to final expenditure deflation were noted.[3] They said that the "first and the most desirable approach is to attempt to price specific construction projects" as in the case of highway construction and that the second approach is "to provide overall corrections for certain biases" in the existing composite price indexes "pending the successful pricing of further construction type projects" mentioned in the first approach.

The first approach involves the selection of construction products and projects with homogeneous characteristics and the collection of relevant price information. Research in this regard has already commenced in the Bureau's Prices Division on certain types of structures.[4] It will probably take some years to develop, test, and make the appropriate price indexes for the whole range of structures available for deflation work.

The second approach, which is an interim solution to the existing problem, involves estimated corrections for biases in the composite price indexes of labour and materials. The corrections consist of an adjustment to wage rates for "productivity" using Dacy's method[5] and introduction of an additional input for gross profit margin price. The following excerpt from the aforesaid Emery and Garston paper, which is self-explanatory, deals with the approach.[6]

> The basic approach to the productivity adjustment will be that which was originally developed by the U.K. Board of Trade, and which has been elaborated by Dacy. In order to calculate unit labour costs, it is essential to be able to measure real gross output for a given commodity, or a grouping of similar commodities. Because of the pricing problems connected with unique goods, materials used, which are generally capable of being deflated, are taken as a first proxy to output of construc-

> tion for each of the various types, such as housing, engineering (other than highways and portions of electric utilities) and non-residential building construction. Deflated materials used are therefore taken as a proxy to constant price construction put in place. From these data are calculated productivity changes in order to convert wage rate data to unit labour cost indexes. . . . .
>
> The gross profit margin adjustment, if it is decided to include it, will be less well founded. In fact, the ratios should be related to capital stock. Lacking estimates of real capital stock for the construction industry, gross profits per unit of output are calculated, using once again the deflated materials proxy for output.

In essence, the above method is based on Dacy's assumption that "output (in physical terms) is proportional to the real input of materials".[7] This assumption was originally developed by the U.K. Board of Trade which stated that "changes in output on the same type of work, e.g. on housing work, can be measured by changes in the quantity of materials used per man, measuring this in general by the value of materials used at constant prices."[8]

The term "gross profit" implies "profits and overhead costs, etc." which are also inputs in addition to labour and materials. In other words, it represents the "residual" after deducting value of labour and materials inputs from the total value of construction. Therefore, three indexes, namely, the wage rate index adjusted by a productivity factor, the materials' price index, and the gross profit margin price index, have to be weighted and combined to derive the overall price index for deflating the current price value of construction expenditures. This methodology can be summarized in the following four equations:

1. If K is the deflated value of materials, K' is the index of deflated value of materials, C is current price value of materials, and M' is the materials' price index, the following relation is obvious:

   $K = \frac{C}{M'}$; K' can be derived by indexing K.

2. If O' is the physical output index, then, based on Dacy's assumption referred to previously, $O' = K'$.

3. If L' is the manhour index, Z' is the productivity adjustment factor, and * is an adjustment for trend, $Z' = \left(\frac{K'}{L'}\right)^{*}$

4. If P' is the overall price index, W' is the wage rate index, R' is the gross profit margin price index derived by indexing

   $$\frac{\text{Gross Profit}}{\text{Deflated Value of Materials}},$$

   and aw, am, and ar are the base-period weights of labour, materials, and the residual, respectively,

   $$P' = aw\,\frac{W'}{Z'} + am^{M'} + ar^{R'}.$$

   (The "prime" in the above equations is to be interpreted as "index".)

   This is essentially an input-cost index with additional features to adjust wage rates for productivity and to incorporate an additional input, namely, gross profit margin price.

While noting the method, Emery and Garston cautioned that "to the extent that increasing use is made of off-site prefabricated materials, the proxy output measure will be too high, as will be the correction for productivity", and that the aggregative adjustments for changes in productivity and profit margins "will produce results which will contain a degree of ambiguity".[9] They added, that despite these weaknesses, this method should be regarded as an improvement over the heretofore existing method.[10]

After careful consideration of the existing and the proposed methods of deflation, it was decided to incorporate the productivity adjustment and to include gross profit margin price index as an additional input in the calculation of revised price indexes of residential and non-residential construction excluding highways, electric utilities and railways for use in the historical revision of the Accounts. Highways were excluded, because the price indexes used for deflation are based on units of construction work put in place using bid prices on contracts and hence are free from bias.[11] For electric utilities and railway construction, the price indexes are still based on inputs of labour and materials. Data shortages made it impossible to introduce an explicit adjustment for productivity and profit margin.[12] However, these types of construction have relatively smaller weights[13] in the total non-residential construction (about 12 per cent for 1966) and their omission from this exercise for the time being would have an insignificant effect on the implicit price index of non-residential construction expenditures of the GNE. Further research and development on the lines suggested in the first

RETAIL TRADE, POST-CENSAL REVISIONS, 1966-1969

F.L. Torrington*

Introduction

The following data constitute the final revisions to the data obtained in the course of monthly and annual retail trade surveys. When the results of the 1966 Census of Merchandising became known, it was possible to compare them with those obtained in the 1966 surveys and adjust the post-censal data accordingly. At the same time, certain revisions had to be made to the 1966 Census results themselves, in the light of information received after they had been published, so that some of the 1966 data shown in the tables below will be found to be at variance with those published in the census bulletins.

In the 1966 Census of Merchandising, several kinds of business were re-defined and a new classification was added: General Merchandise Stores. Thus, the 1966 Census and the revisions to the post-censal estimates presented here constitute a definite break in the continuity of data.

The most substantial change in definitions was made in the department store category. Department store mail order catalogue sales were no longer included with department store sales but were incorporated in the new group, "General Merchandise Stores". This classification also contains stores which occupy a position somewhere between department stores and variety stores and whose sale of food amounts to less than one third of total sales, (unlike "General Stores" whose grocery sales amount to between one third and two thirds of total sales). Furthermore, sales of concessions operating in department stores, which had previously been reported in the kind of business to which they belonged, were incorporated in department store sales and deducted from their respective groupings.

The DBS Bulletin, Catalogue No. 63-517, Retail Trade, Post-Censal Revisions, 1966-1969, has now gone to press. When published, this bulletin will provide retail trade data in eighteen classifications broken down by month, by province and by type of organization (chain and independent stores). The highlights are presented below; it should be noted, however, that the estimates for 1969 are subject to further adjustments.

Summary of Results

From 1966 to 1969 retail sales rose by 20.9 per cent. Substantially above-average increases can be noted in department stores (+38.0 per cent), general merchandise stores and department store catalogue sales (+33.7 per cent), and in the "all other" category (+31.2 per cent). (Alcoholic beverage store sales are an important part of this category.)

Slightly above-average increases were recorded for service stations and garages (+22.8 per cent), women's clothing stores (+23.3 per cent), and shoe stores (+24.5 per cent).

Close to average sales increases occurred in grocery and combination stores (with and without fresh meat), variety stores, and drug stores.

Slightly below average sales increases occurred in the "all other food store" category (+13.2 per cent), men's clothing stores (17.9 per cent), family clothing stores (+15.3 per cent), hardware stores (+13.0 per cent), furniture, TV, and appliance stores (+16.7 per cent), and jewellery stores (+16.2 per cent).

Substantially below-average sales increases were recorded for general stores (+7.7 per cent), motor vehicle dealers (+10.8 per cent), and fuel dealers (+2.2 per cent).

From 1966 to 1969, retail sales increases of the provinces were noted as follows:

Above-average increases occurred in Newfoundland (+23.9 per cent), Ontario (+24.1 per cent), Alberta (+27.3 per cent) and British Columbia (+23.4 per cent). All other provinces had increases below the +20.9 per cent average, notably Saskatchewan (+0.9 per cent) and Manitoba (+15.5 per cent).

During the intervening years, however, the retail trade of the provinces progressed at varying rates: For example, in 1967, Quebec showed the highest increase in retail sales (+8.5 per cent) over 1966 of any province (with the exception of Newfoundland), but in 1968 it had made little additional progress – only Saskatchewan showed less. The Canadian average retail sales rose from 1968 to 1969 by another 7.3 points. Ontario, Alberta and British Columbia were the only provinces to exceed this. The Atlantic Provinces which had recorded above-average gains in retail sales in 1968 over 1967 did not progress as rapidly in 1969, Manitoba's retail sales increase was below average in both 1968 and 1969, and Saskatchewan's retail sales which had remained static between 1967 and 1968, actually dropped back in 1969 to approximately the 1966 level.

An analysis by type of organisation, i.e. chains, department stores and independent stores, revealed the following:

From 1966 to 1969, department store sales increased by 38.0 per cent, those of chain stores (excluding department stores) by 29.4 per cent,

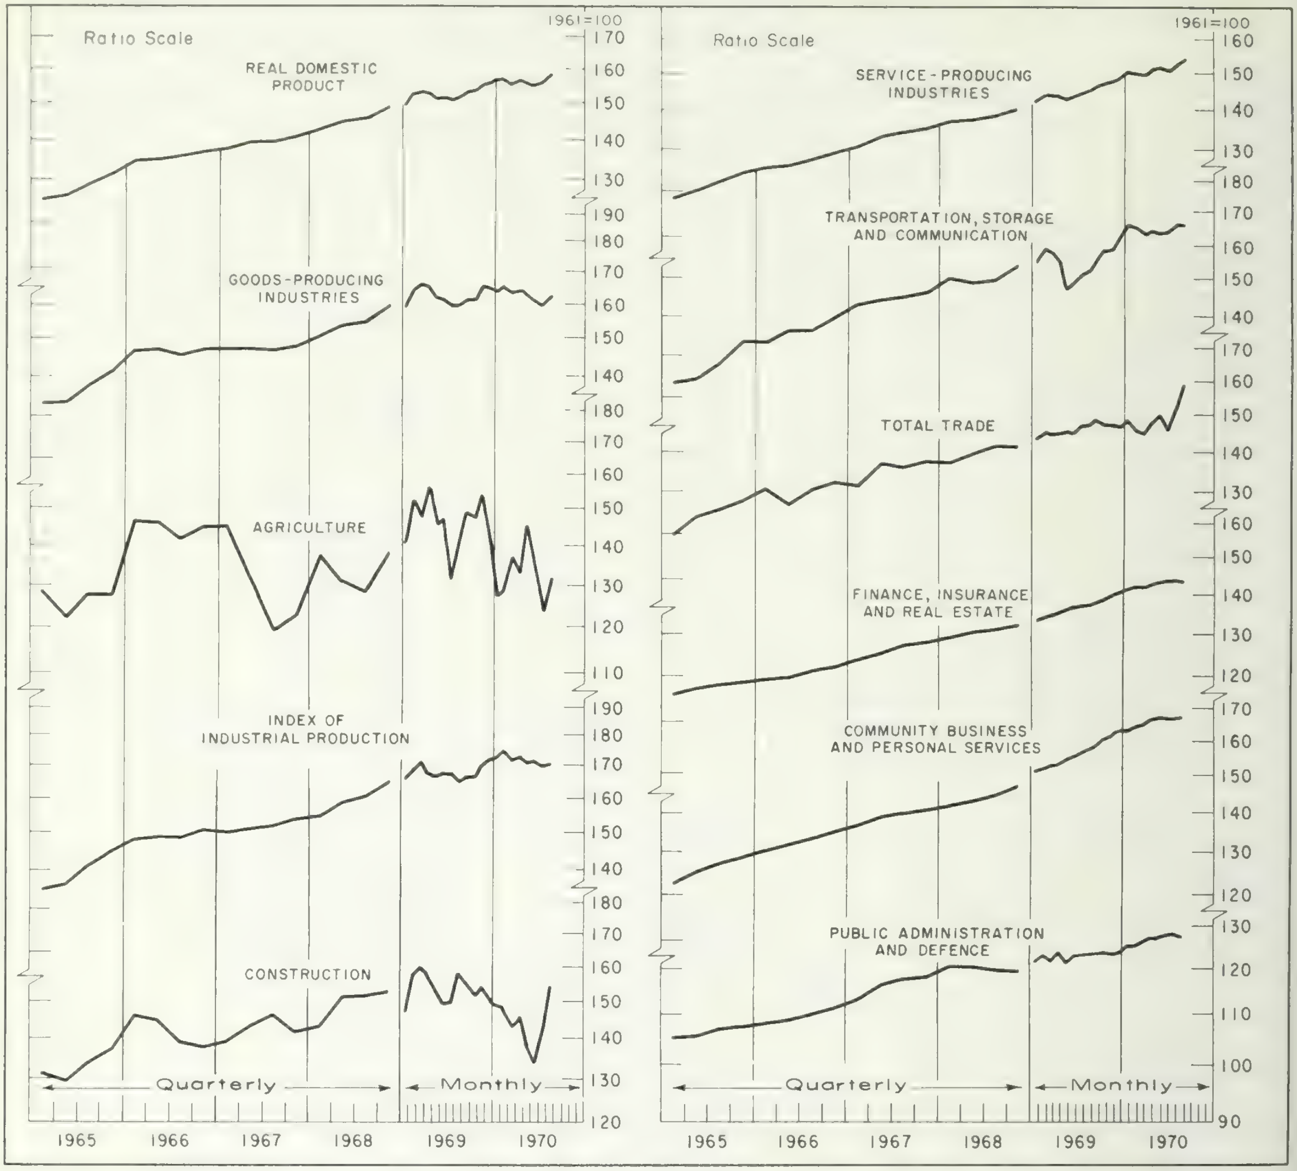
ed data arising from the historical revision of the National Income and Expenditure Accounts. [4] See footnote to Table 4.1, Section 3.

SELECTED ECONOMIC INDICATORS–SEASONALLY ADJUSTED

REAL DOMESTIC PRODUCT, (More details in Section 3, Table 2.1)

THE REAL DOMESTIC PRODUCT INDEX ROSE STRONGLY IN AUGUST, BASED ON ADVANCES IN BOTH GOODS-PRODUCING AND SERVICE-PRODUCING INDUSTRIES. ALMOST ALL OF THE INCREASE IN REAL DOMESTIC PRODUCT CAME FROM SHARP INCREASES IN TRADE AND CONSTRUCTION, AND, TO A LESSER DEGREE, FROM AGRICULTURE.



real domestic product, by industry of origin, volume indexes (1961=100)

		real domestic product	goods producing industries	agriculture	index of industrial production*	construction	service producing industries	transportation, storage, communication	trade	finance, insurance and real estate	community, business and personal service industries	public administratio and defence

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and other government investment income. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitary smoothing of crop production and standard seasonal adjustment for with-drawls of grain from farm stocks and the change in other farm-held inventories. Because of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts, First Quarter 1970 (D. B. S. 13-001).**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings. [4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) [5] See footnote 4, Table 1.1 **Source: National Income and Expenditure Accounts, First Quarter 1970 (D. B. S. 13-001).**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated sociations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment urance. [2] Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968. [3] With- g taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tes have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of .

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and etween major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar omparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and r short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing erence between direct measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown for the first quarter 1970. SDR's were issued ary 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly mates of the Canadian Balance of International Payments (67-201 and 67-001), D. B. S.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D. B. S.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the nth. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and blic administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average ekly Wages and Salaries, (72-002), D. B. S.**

[1] See footnote 1 and source in Table 12. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given n Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included n non-durable manufacturing. [4] Except machinerv and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per t, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. They **nnot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 9 issue of the Canadian statistical review.** **Source: Prices and Price Indexes (62-002), D. B. S.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

				inventory at end of month						
monthly averages or months						all inventory held				ratio of inventories owned to shipments
	shipments[1]	new orders received during month[3]	unfilled orders at end of month[4]	owned[2]	held but not owned	total	raw materials	goods in process	finished products

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), D. B. S.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manu- rers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), D. B. S.**

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] Electric and other. [5] Excludes apartment type machines. [6] End of period. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), D.B.S.**

[1] Includes record players. [2] Includes producers' shipments for export. [3] Includes portables. [4] Radio phonograph combinations. [5] Includes monaural and stereo with and without amplifiers. [6] Excludes producers' shipments for export. [7] Included with "total television receivers". [8] Customs clearance; radio sets include all types; television sets include colour and black and white. **Sources: Radio and Television Receiving Sets (43-004); Trade of Canada, Imports (65-007), D.B.S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1]Includes crude oil, condensate and pentanes plus. [2]Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3]Gross new production by field less field flared and waste. [4]By gas utilities, does not include imports. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery
duction (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane com-
gled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove
kerosena and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a
parable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha special-
, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D. B. S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D. B. S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage side. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan eas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The re-inder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are ased on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total alue of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above able covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. ven though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), . B. S.**

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes aking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. ncludes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of produc-on will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** uarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Produc-on of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. ---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all oth stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Sourc** **Retail Trade (63-005), D. B. S.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968, 1969 and 1970 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See also **Credit Statistics (61-004)**. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [4] Personal cash loans of up to $1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usually repaid in instalments. Amounts shown include interest and other unearned income finance charges. [6] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. [7] Starting with January 1970, the sales finance companies component of consumer credit has been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. **Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculat separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most importa are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade Canada, Exports (65-004), D. B. S.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Some series such as General purpose machinery have bee revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now includ oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007)**

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1967 and 1968 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Prior to 1970, gures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. These groups covered all air carriers with gross annual ying revenues of over $100,000 prior to January 1969 and over $150,000 during 1969. Figures for 1970 include only the operations of the seven largest airlines in anada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-r) normally account for approximately 95 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [3] United States and other foreign rriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail d excess baggage. **Source: Civil Aviation (51-001), D.B.S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver-
es of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and
ivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than
year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of
nada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.
cluding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does no include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements mad under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercia Failures (61-002) Quarterly, D. B. S.**

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1] This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. [2] Under the Technical and Vocational Training Assistance Act. [3] Government contributions under the Hospital Insurance and Diagnostic Services Act. [4] Includes treatment and rehabilitation services. [5] For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities-Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). [6] As of April 1, 1969 Industry and Trade and Commerce are combined.
Sources: Canada Gazette and Dept. of Finance.

(Continued from page 5)

approach might make it possible to improve the price indexes of the electric utilities and railways also.

II. Basic Data Sources and Method of Calculation

For the historical revision of the Accounts, deflation of current price values of all components of the gross national expenditure was done using price indexes of the following three base periods:

For 1950 - 56: Base year 1949 = 100;

For 1956 - 61: Base year 1957 = 100;

For 1961 on: Base year 1961 = 100.

The overall price indexes for construction expenditures were also calculated for these three base periods using equation (4) mentioned earlier, namely,

$P' = aw\frac{W'}{Z'} + am^{M'} + ar^{R'}$.

Following is the method used for calculation of the components in the equation.

Annual data required for value of materials, wages and salaries (including earnings and withdrawals of owners and partners), and total value of construction were obtained from 1957 onwards[14] from the tabulations of the Contractors Survey and Capital Expenditure Survey of the Bureau's Business Finance Division. These basic data were adjusted for National Accounts concept of capital formation and for internal consistency. This adjustment involved the following steps:

1. As the surveys cover contract and own-account construction both for new and repair, all repair construction done either by contract or own-account should be excluded for National Accounts concept of capital formation.
2. As the breakdown of total value of construction into materials, wages and salaries (including earnings and withdrawals of owners and partners) and the "residual" were available for the contract construction only (new and repair combined), a similar breakdown for own-account construction should be estimated.
3. The relevant amounts relating to repair for both contract and own-account construction should be estimated and excluded from the value of materials, wages and salaries, and the residual.

Although these three steps were shown separately for better understanding of the method, the end results of these steps were obtained with the application of a ratio specially calculated for each year, to the aforesaid breakdown of contract (new and repair combined) construction. The same method was used for three categories of construction, namely, residential building construction, non-residential building construction, and non-residential other engineering construction.

Relevant price indexes of materials (M') were obtained from the Prices Division[15] and the current price values of materials were deflated. The deflated values of materials thus obtained were indexed (K'). These indexes were used as proxy to output.

The total wages and salaries (including earnings and withdrawals of owners and partners) of each type of new construction was divided by the relevant average annual earnings[16] of construction employees and an estimate of the number of equivalent man-years was obtained for each type of construction mentioned above. The number of equivalent man-years was multiplied by the relevant average weekly hours calculated by the Labour Division and the weekly total manhours of labour used in each type of construction was obtained. These manhours were indexed (L').

The deflated value of materials indexes (K') were divided by the manhour indexes (L') to obtain proxy productivity $(\frac{K'}{L'})$ indexes. The average annual growth rates in these indexes were calculated and it was decided to incorporate the resultant fixed average annual adjustments (Z) for each year of the 1950 - 61 and post 1961 periods for residential building construction, non-residential building construction and non-residential other engineering.[17]

Average hourly wage rates were calculated from 1957 onwards by dividing the total wages and salaries by the manhours mentioned earlier. For the prior years, the information was obtained from the Department of Labour. These wage rate data were indexed (W').

The indexes of productivity adjustment factors (Z') were divided into the wage rate indexes to obtain productivity adjusted wage rates (i.e. unit labour cost indexes, $\frac{W'}{Z'}$).

The adjusted value of materials, and wages and salaries were deducted from the total adjusted value of new construction and the "residual" representing gross profits (including overhead costs) was derived. Ratios of this residual to the total value of new construction[18] were calculated and indexed (R') and these indexes were assumed to represent the price indexes of the "residual". It was decided to incorporate the residual price index as an input from 1957 only as information for the prior years was not available.

---

[14] Prior to 1957, the relevant data are not available.

[15] Price indexes of residential and non-residential building materials published in the *Prices and Price Indexes* of the Bureau, Catalogue No. 62-002 Monthly, were used for deflation. For other engineering, however, a price index is specially calculated for deflation purposes using price indexes of materials such as light structural steel shapes, cold rolled steel, concrete ready mix, copper pipe and tubing, reinforcing rods, and plywood (Douglas Fir). The methodology regarding adjustments for quality changes was explained in *Industry Selling Prices*, DBS, Catalogue No. 62-528 Occasional, 1956 - 68, p. 18.

[16] From the results of a survey conducted for 1963, the Bureau's Business Finance Division calculated average wages and salaries for employees engaged in construction activity. This average is updated by that Division every year using the movements of average weekly wages and salaries calculated by the Labour Division.

[17] The adjustment decided for non-residential building construction was used for other engineering construction also as the calculations in the latter showed erratic results.

The base period weights (aw, am, and ar) for the input components used in the calculations were also obtained from information in the Contractors Survey and Capital Expenditure Survey.

Thus, the calculations for the equation (4) mentioned above, namely,

$P' = aw\frac{W'}{Z'} + amM' + arR'$, were completed and the revised price indexes obtained

These revised price indexes are essentially based on the input approach coupled with an approximate productivity adjustment to wage rates and introduction of the residual price index as an additional input.

Then, the current price values of construction expenditures were deflated by the revised price indexes of the three different base periods mentioned earlier and the constant price values obtained by this deflation process were linked to 1961 base (1961 = 100) for incorporation in the historical revision of the National Income and Expenditure Accounts.

As already mentioned, the above method is only an interim solution to the existing problem of deflating capital expenditures included in the gross national expenditure. It involved estimated corrections for biases in the price indexes used for deflation and it is hoped that future research on this subject would make it possible to incorporate further improvements.

---

[18] Instead of calculating the gross profit margin per unit of output using the proxy output (i.e. deflated value of materials) as suggested by Emery and Garston, the proportion of the "residual" to the total value of construction activity was calculated and assumed to represent the "price of the residual".

[1] 1969 data are subject to further revisions.

while sales in independent stores increased by 15.6 per cent, i.e. below the national average increase of 20.9 per cent.

Department stores made their greatest progress in Nova Scotia, New Brunswick, Ontario and Alberta; their smallest progress was recorded in Prince Edward Island.

Chain stores (excluding department stores) were especially weak in Nova Scotia and to some extent in British Columbia, where independent stores almost managed to hold their own, as they did in Newfoundland. Alberta showed such a substantial increase in retail sales from 1966 to 1969 that all types of retail trade organisations recorded increases which were above the national average.

Table D shows dollar sales and Table E the relative share of chain stores and independent stores by kind of business. Overall, in 1966, chain stores including department stores, accounted for 33.0 per cent, and independent stores for 67.0 per cent of Canada's retail sales. Department stores in the new definition, accounted for 8.7 per cent. Corporate chain stores excluding department stores, accounted for 24.3 per cent.

By 1969, the corporate chain stores had made further progress at the expense of independent stores. In that year, chains, including department stores accounted for 35.9 per cent of total retail trade, department stores had 9.9 per cent of total retail trade, chain stores excluding department stores accounted for 26.0 per cent, and independents for 64.1 per cent of Canada's retail trade.

The kinds of businesses in which chain stores occupy an important share are: grocery and combination stores, general merchandise stores, variety stores, shoe stores, jewellery stores and the "all other" category. In grocery and combination stores, chains increased their share from 44.9 per cent in 1966 to 48.6 per cent in 1969. The share of chains in general merchandising stores (which, it will be remembered, include department store mail order catalogue sales) decreased from 74.8 per cent to 72.1 per cent. Chains in variety stores increased their already substantial share still further: from 86.7 per cent in 1966 to 87.6 per cent in 1969. A slight decline in the share of chains was recorded in shoe stores: from 45.1 per cent in 1966 to 44.0 per cent in 1969. The share of chains remained almost constant at 33.6 per cent in jewellery stores, and increased in the "all other" category from 37.4 per cent to 38.7 per cent.

In the kinds of business where chains are less strong, the following trends are noteworthy: In men's clothing stores, the share of chains dropped slightly, from 13.2 per cent in 1966 to 12.7 per cent in 1969; it increased in women's clothing stores from 26.5 per cent to 31.4 per cent and in family clothing stores from 21.9 per cent to 24.3 per cent.

Table F is designed to show the seasonal pattern of retail trade and Table G shows the relative importance of December sales to the different trades for 1966 to 1969.

CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française, Revue Statistique du Canada, n° du catalogue 11–003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of the Dominion Bureau of Statistics. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Satistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

The *MCD*, or *Months for Cyclical Dominance,* in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 2, Tables 5, 6 and 7 – Births, Deaths and Marriages, by Province

These have been revised for 1969.

Section 3, Table 3-1. – Financial Flows Matrix

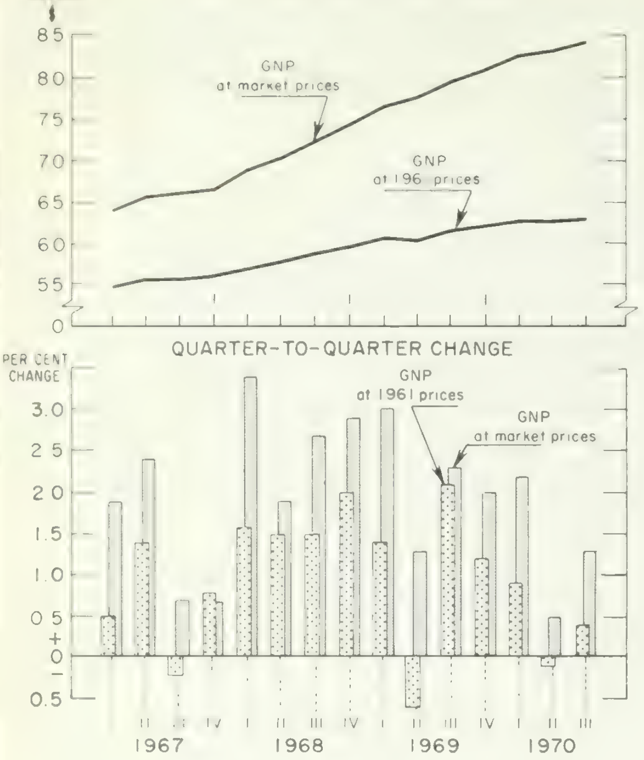
The National Income and Expenditure Accounts revisions result in some conceptional and statistical changes to the Financial Flows Accounts. Revised data of The Financial Flows Accounts are not comparable with those of earlier periods which do not reflect these changes. For detail of these revisions see "National Income and Expenditure Accounts, 1926-1968", Catalogue No. 13-531. Financial Flow Matrices in this issue reflect the revisions of the National Income and Expenditure Accounts for the years 1968 and 1969 and the first and second quarter 1970.

A new publication of the historical quarterly series for all sector and category tables, and annual matrices covering the first quarter 1962 onwards, is expected to be released by 1971.

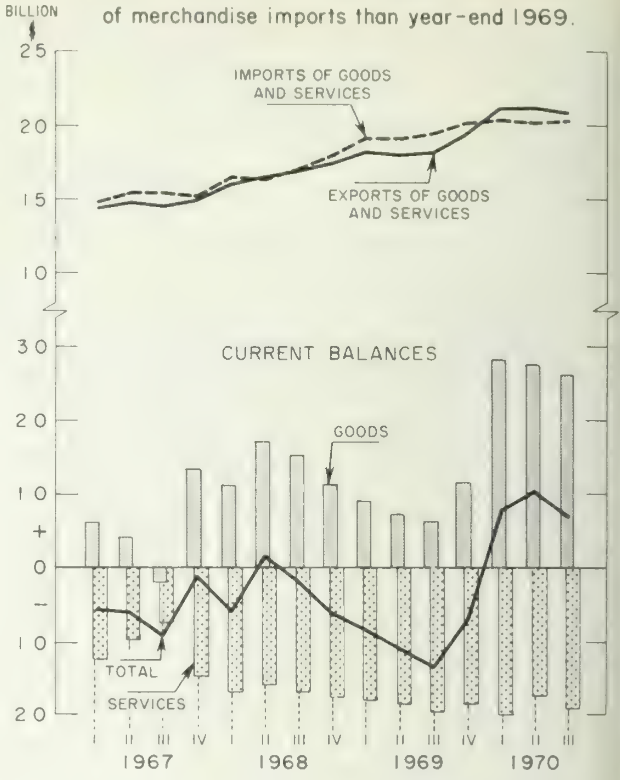
Section 10, Table 6 – Consumer Credit

Commencing in September 1970 "Sales finances companies" and "Consumer loan companies" have been combined under "Instalment financing". The new series, "Instalment financing", will be incorporated in the January 1971 issue of this Review.

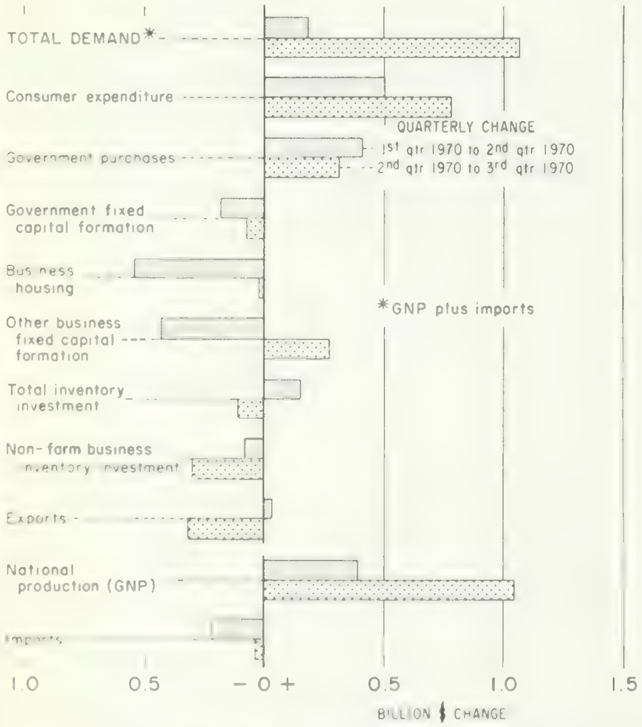
In the third quarter GNP rose 1.3 per cent at market prices and 0.4 per cent in real terms



The first three consecutive quarterly surpluses on current account since 1952 resulted from higher levels of merchandise exports and lower levels of merchandise imports than year-end 1969.

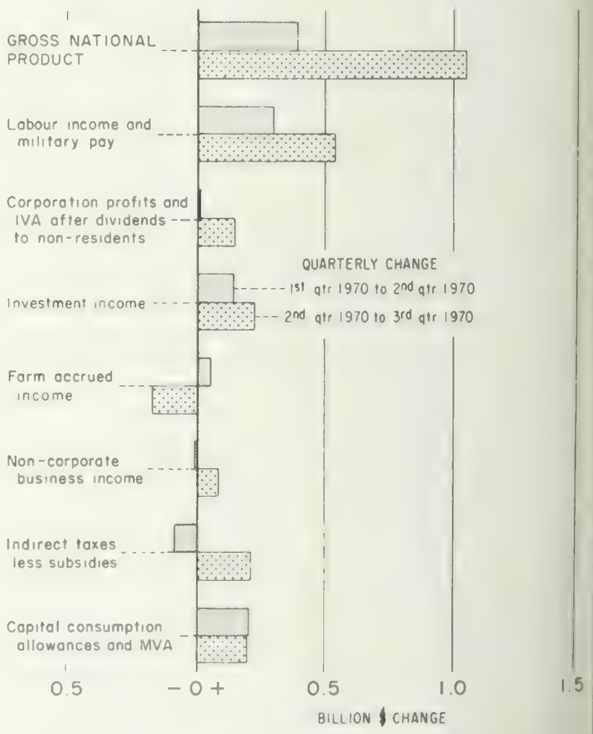


Total demand* rose $1.1 billion or 1 per cent, with a change from a decline to a gain in fixed business capital spending and a further rise in consumer spending



ALL DATA SEASONALLY ADJUSTED AT ANNUAL RATES

The faster rise in GNP was accompanied by gains in labour income and corporation profits



NATIONAL INCOME AND EXPENDITURE ACCOUNTS THIRD QUARTER, 1970

Preliminary estimates of the National Income and Expenditure Accounts indicate some modest improvement in activity in the third quarter, while also confirming that in recent months the Canadian economy has been traversing a period of adjustment characterized by slow growth in production, a lack of any sustained dynamic demand factor, and high rates of unemployment. There were indications at the end of the quarter and again in October of a pick-up in employment, which was reflected in a drop in the seasonally adjusted unemployment rate to 6.6 per cent in October from the peak 6.9 per cent rate in the previous month. A feature of the third quarter, no doubt partly due to the slow pace of the economy in 1970 and also to the appreciation of the Canadian dollar, was the lessening in the rate of increase of most measures of price movements, especially in the area of consumer spending.

The value of aggregate production, seasonally adjusted at annual rates, rose by $1.0 billion in the third quarter to reach a level of $84.1 billion. This represented a percentage increase of 1.3 per cent, markedly up from the small increase of half a per cent in the second quarter but well below the average quarterly rate of increase of around 2.2 per cent experienced in the last few years. After taking account of rising prices, the gain in the volume of production amounted to 0.4 per cent. This compares with a marginal constant dollar decline of 0.1 per cent in the second quarter and with a 0.9 per cent increase in the first quarter.

The implicit GNE deflator rose by 0.9 per cent, an apparent acceleration over the 0.5 per cent increase shown in the second quarter. However, because this overall measure reflects weight shifts as between the various categories of final demand as well as price changes in individual goods and services, it is not always a useful yardstick of price movement over short periods when significant shifts in the composition of demand are taking place. In fact, virtually all other measures of price performance continued to show only a relatively modest advance through the third quarter. The mplicit GNE deflator is particularly sensitive to nventory changes, which can display quite irregular movements in both their value of physical change and in their implicit prices. This has in fact occured in recent quarters. Excluding inventories the mplicit index decelerated in the third quarter from 0.9 to 0.6 per cent.

The acceleration in economic expansion in the third quarter appeared more due to a modest recovery in total fixed capital formation after two consecutive eclines (the $1.1 billion drop in the second quarter eing particularly severe), than to notable strength in any major component of demand. Consumer expenditure on goods and services, the other sector hat showed persisting weakness in the first half f the year, rose somewhat faster in the third quarter nd made the major contribution to total demand. However, the largest percentage gain occurred in government expenditure on goods and services which, with a 2.0 per cent increase, continued to be an important source of support to the economy. Offsetting these increases to some extent, exports of goods and services fell by $312 million from the very high level of over $21.1 billion achieved during the first quarter and maintained through the second quarter. Inventory investment also fell, entirely as a result of a substantial decumulation in the farm component.

Business fixed capital formation has been the most sluggish sector of the economy this year, declining by $424 million in the first quarter and sliding downward by a further $964 million in the second quarter, when all three components, residential construction, non-residential construction and machinery and equipment shared in the fall. In spite of a moderate gain of $264 million in the third quarter, spending in this sector for the first nine months of the year was still running at a level considerably lower than the anticipations for 1970 as reported in the mid-year survey of business intentions. This quarter's reversal of the declining trend was entirely due to a sharp turnaround in machinery and equipment spending. The gain in this component of $292 million, or 5.8 per cent, was the largest since the first quarter of 1968. Both residential and non-residential construction continued to fall in the quarter, though very marginally. Related indicators suggest some strength in construction in future months. This is most evident in residential construction, which has experienced a sharp recovery of new starts in recent months, especially of low income housing and of apartment buildings, after continual declines since the beginning of 1969.

Domestic markets for consumer goods and services continued to display hesitancy in the third quarter. Total personal expenditure rose by a moderate 1.6 per cent, compared with 1.0 per cent in the second quarter and with a marginal decline in the beginning quarter of the year. However, much of the third quarter acceleration was due to the services item "net expenditure abroad", which consists mostly of Canadian travel expenditure abroad (also reflected in imports) less foreign travel expenditure in Canada (reflected in exports). The former increased this quarter, while the latter declined, leaving a large increase in net expenditure abroad. On a domestic basis, total personal expenditure rose only slightly faster in the third quarter than in the second quarter, 1.1 per cent versus 0.9 per cent. It is noteworthy that purchases of durable goods failed to accelerate even though these expenditures are still running at a level almost 7 per cent lower than in the fourth quarter of 1969. This quarter they posted a gain of 1.6 per cent (almost entirely due to increased car purchases) compared with a 3.2 per cent gain in the second quarter. In the first quarter they had fallen by 11.0 per cent.

After displaying exceptional strength in the last quarter of 1969 and in the first quarter of this year, exports levelled off in the second quarter and weakened a little in the third. The decline of 1.5 per cent was entirely caused by lower merchandise exports to the United States and the United Kingdom; service exports rose by 2.2 per cent, largely due to higher interest and dividends receipts. Merchandise imports also declined in the quarter, by 1.8 per cent, in spite of an increase in imports of machinery and equipment. Increased service imports, paced by travel payments, offset the decline in merchandise, leaving total imports only marginally higher than in the second quarter. The net result of external transactions was to lower the surplus with non-residents, on a national accounts basis, from $1,056 million to $720 million.

The continuing slack in business activity was reflected on the income side in a modest increase in wages and salaries of 1.2 per cent and in a 1.1 per cent increase in corporation profits. The percentage increase in wages and salaries, though twice the second quarter rate of 0.6 per cent, was nevertheless a very low rate of increase for this series which has very seldom experienced quarterly gains of less than 2.0 per cent in recent years. The small rise in profits followed a 4.9 per cent drop in the second quarter. Largely sustained by sharply increased transfer payments from government, up 8.7 per cent, personal income rose by 1.5 per cent compared to 1.0 per cent in the second quarter. Personal income taxes and other deductions showed practically no change; as a result personal disposable income, which had fallen by 0.5 per cent in the previous quarter, rose by close to 2.0 per cent this quarter.

With the results obtained so far this year it is possible to venture cautious guesses of economic performance for the year as a whole. Thus, if the seasonally adjusted fourth quarter remained at the third quarter level, current dollar GNP would rise by 6.3 per cent in 1970 over 1969. With a 1 per cent rise, the annual advance would be of 6.6 per cent. Similar assumptions concerning the fourth quarter in constant dollars would yield annual rates of real growth of 2.7 per cent and of 3.0 per cent. Although these rates of increase are hypothetical they do point to a very marked deceleration in economic expansion for the year as a whole. In 1969, GNP rose by 10.0 per cent in current dollars and by about half this increase in volume.

Price Movements

The revised estimates[1] of the implicit price index for Gross National Expenditure excluding inventories reveal a more discernible price trend than previously published estimates. After a slowdown in the third quarter of 1969, price increases remained approximately constant until the third quarter of this year, when a deceleration was again noted, from 0.9 to 0.6 per cent. While conceptually different, other more conventional base-weighted price indexes, the Consumer Price Index, the Industry Selling Price Indexes and the General Wholesale Price Index, also showed price moderation in the quarter.

One of the more interesting price developments in the quarter was the levelling in the implicit price of personal expenditure, after increases of 0.6 per cent in the second quarter and of 1.5 per cent in the first quarter. This remarkable slowdown was entirely due to declines in the prices of the goods categories, as services showed a sizable price rise of 0.9 per cent. Lower prices of imports resulting from the appreciation of the Canadian dollar following the freeing of the exchange rate, contributed to the decline in goods prices. Within durable goods, price declines were especially notable in furniture and household equipment, and recreational equipment. The price decline in semi-durables was centered in clothing and footwear and accessories, while that in non-durables was dominated by falling food prices. In services, price rises were widespread.

The implicit price index of business gross fixed capital formation decelerated sharply in the third quarter. The current rise of 0.2 per cent compares with rises of between 0.7 and 0.8 per cent in the last four quarters. Easing in the rates of increase of both labour and materials costs contributed to the deceleration in the price for construction. Machinery and equipment, which has a large import content, registered a decline of 0.3 per cent.

Price movements in the external sector were obviously affected by the freeing of the exchange rate last June. The implicit price index for imports of goods and services fell by 1.0 per cent. As has already been noted, this decline was reflected in the prices of goods purchased by the various sectors of the economy, and in particular in the prices of goods purchased by persons and of machinery and equipment purchased by businesses. The price of exports remained unchanged in the quarter. The implicit price of merchandise exports declined, largely because of changes in the composition of export demand, but this was offset by generally increasing prices of service exports.

The Components of Demand

Personal Expenditure on Consumer Goods and Services

Consumer expenditure on goods and services advanced 1.6 per cent to a level of $49,408 million seasonally adjusted at annual rates. Although consumer expenditure continued to recover after contracting by 0.1 per cent in the first quarter, its rate of advance was still modest when compared with advances scored in 1968 and 1969.

(Continued on page 111)

---

[1] Revised estimates for 1969 and 1970 are the result of a change in the technique of seasonally adjusting the constant dollar series. The new technique was employed in order to derive the best possible estimates of both seasonally adjusted constant dollars aggregates and components, and of implicit prices in the current period.

ABOUR FORCE (More detail in Section 4, Table 3)

TOTAL LABOUR FORCE AND TOTAL EMPLOYED INCREASED 0.1 PER CENT AND 0.4 PER CENT, RESPECTIVELY, IN CTOBER, WHILE UNEMPLOYED DECLINED 4.1 PER CENT. THE UNEMPLOYMENT RATE FELL FROM 6.9 PER CENT TO 6.6 PER ENT, THE FIRST MONTHLY REDUCTION IN 1970.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and other government investment income. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitary smoothing of crop production and standard seasonal adjustment for with-drawls of grain from farm stocks and the change in other farm-held inventories. Because of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts, Third Quarter 1970 (D. B. S. 13-001).**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings. [4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) [5] See footnote 4, Table 1.1 **Source: National Income and Expenditure Accounts, Third Quarter 1970 (D. B. S. 13-001).**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment nsurance. [2] Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968. [3] Withding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of ies.

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and ween major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar nparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and ner short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing fference between direct measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown for the first quarter 1970. SDR's were issued nuary 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly timates of the Canadian Balance of International Payments (67-201 and 67-001), D. B. S.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D. B. S.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the onth. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and ublic administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average eekly Wages and Salaries, (72-002), D. B. S.**

[1] See footnote 1 and source in Table 12. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

Table 15: average weekly wages and salaries,[1] by industrial division, based on the 1960 standard industrial classification-(dollars)

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review.** **Source: Prices and Price Indexes (62-002), D. B. S.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

monthly averages or months	shipments[1]	new orders received during month[3]	unfilled orders at end of month[4]	inventory at end of month						ratio of inventories owned to shipments
				owned[2]	held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), D. B. S.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manu-acturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), lew Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), D. B. S.**

[1] Includes record players. [2] Includes producers' shipments for export. [3] Includes portables. [4] Radio phonograph combinations. [5] Includes monaural and stereo with and without amplifiers. [6] Excludes producers' shipments for export. [7] Included with "total television receivers". [8] Customs clearance; radio sets include all types; television sets include colour and black and white. **Sources: Radio and Television Receiving Sets (43-004); Trade of Canada, Imports (65-007), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. **Source: Electric Power Statistics, (57-001), D. B. S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities, does not include imports. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosena and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D. B. S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D. B. S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001), Production, Shipments and Stocks on Hand of Sawmills (35-002), (35-003) monthly, (35-204) annual and Trade of Canada, Imports (65-007), Exports (65-004), D. [1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D. B. S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. [3] Excl. of NFLD. Western grain prices used in the construction of the Index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 1969, equal in value to 100 lbs. of Index 100 live hog. [5] Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective January 1969, as a % of the price of 100 lbs. live hog, Index 100. [6] Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. [7] Quotations refer to steers all weights. [8] Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes aking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** uarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. B. S.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), D. B. S.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968, 1969 and 1970 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

Table 3: value of wholesale sales[1], based on the 1960 standard industrial classification (million dollars)

---

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See also **Credit Statistics (61-004)**. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [4] Personal cash loans of up to $1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usually repaid in instalments. Amounts shown include interest and other unearned income finance charges. [6] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. [7] Starting with January 1970, the sales finance companies component of consumer credit has been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. **Sources: Credit Statistics (61-004), D.B.S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), D. B. S.**

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), D. B. S.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

			farm products and food						mine products				forest products		
monthly averages or months	total railway revenue freight loadings (carload and non-carload) (000 tons)	**total revenue cars loaded (carload only)**	wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash[2]	coal, sand, cement and other mine products	lumber and plywood	pulpwood	other forest products

[1] Based on weekly (monthly in 1970) carloadings reported by major lines carrying over 99% of railway traffic in Canada. [2] Included in other manufactures and miscellaneous prior to 1970. [3] Includes small tonnage of express traffic not available before 1970. [4] Receipts from U.S. connections not separated from receipts from other Canadian roads before 1970. [5] Data prior to 1970 not comparable with current data. [6] Thousand tons. **Source: Weekly Report, Car Loadings (52-001), Railway Freight Traffic (52-002), D.B.S.**

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1967 and 1968 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Prior to 1970, igures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. These groups covered all air carriers with gross annual lying revenues of over $100,000 prior to January 1969 and over $150,000 during 1969. Figures for 1970 include only the operations of the seven largest airlines in anada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transir) normally account for approximately 95 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [3] United States and other foreign arriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail nd excess baggage. **Source: Civil Aviation (51-001), D.B.S.**

---

[1]Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2]Mainly deposits of foreign banks. [3]Capital, rest fund and ndivided profits as at the latest fiscal year-end. [4]Including issues payable in foreign currency. [5]Securities purchased direct from issuer with a term of less than ne year at time of issue are classified as loans. [6]Excluding Canadian day-to-day loans. [7]Loans to grain dealers and exporters. [8]Loans to finance purchase of Canada Savings Bonds at time of issue. [9]Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10]Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base etals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks cluded in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries xcept electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices d Price Indexes (62-002), D. B. S.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D. B. S.**

Note: The implicit price indexes vary from estimates published in the first and second quarter 1970 publications due to a change in the method of seasonally adjusting the constant dollar estimates.

Durable goods advanced 1.6 per cent after an advance of 3.2 per cent in the second quarter. New and used automobiles was the only group to show a noticeable increase, of 4.6 per cent. Both new and used cars showed increases, of 4.2 per cent and 6.6 per cent respectively. Though the rise in new cars followed a larger rise of 11.3 per cent in the second quarter, the increases of the last two periods represented only a partial recovery of somewhat less than half of the ground lost in the steep 25.0 per cent first quarter decline. It is of interest that the increase in used cars occured after two consecutive declines. Other components showed little change, except furniture, fixtures and floor coverings, which fell by 2.0 per cent.

Semi-durable goods declined by 2.2 per cent, its third decline in the 1969-70 period. The decline was confined to the clothing and footwear group which fell by over 4.5 per cent; it came on top of very small advances during 1970. Men's and boys' clothing, and women's and children's clothing both declined; the former by just under 6 per cent; the latter by just over 4 per cent. Expenditures on personal accessories increased by over 4 per cent.

Consumer expenditures on non-durable goods rose by 2.2 per cent after a low gain of only 0.1 per cent in the second quarter. Fuel and utilities advanced by over 5.0 per cent, the largest increase in this component since the third quarter of 1968. Within this group over 7 per cent in heating fuels was considerably above the pace set during 1969. Gas also increased sharply, by over 12 per cent. Expenditure on alcoholic beverages advanced over 2 per cent while expenditures on tobacco showed no change. Partially offsetting these advances was a just under 4 per cent decline in non-durable household supplies.

The 2.0 per cent rise in consumer expenditure on services was the largest since the third quarter of 1969. The impact of the divergent movements as between foreign travel payments, which increased, and travel receipts, which declined, on the "net expenditure abroad" component has already been noted. Excluding the rise in this item, services rose by 0.8 per cent. Strong advances were in expenditures on personally operated transportation, and on shelter. Household services also increased. Purchased transportation expenditures declined fractionally.

Gross Fixed Capital Formation

Investment outlays rose by $196 million or 1.2 per cent over the second quarter level to $16,064 million, on a seasonally adjusted basis. The expansion in demand for fixed capital goods resulted from an increase of $248 million in machinery and equipment outlays more than offsetting small declines of $12 million and $40 million in residential and non-residential construction outlays. Business fixed capital formation rose by 2 per cent, while government fell by 2.3 per cent.

In the business sector, non-residential construction investment was almost unchanged, while machinery and equipment investment climbed by $292 million. The sluggishness in construction excluding housing occurred in the building component as outlays on engineering projects rose somewhat. Increased demand for machinery and equipment was reflected in a rise in domestic shipments and in imports of industrial machinery and communication equipment.

The decline in business residential housing noted in the first half of the year was almost arrested this quarter. A sharp increase in apartment unit starts during the quarter contributed marginally to the value of apartment investment, being offset by the weight of the diminished backlog of apartments started in the first half of the year and under construction during the quarter.

For the first nine months of 1970, business capital outlays were running 4.9 per cent below the like period of 1969. Housing was off 10.4 per cent, non-residential construction 1.4 per cent and machinery and equipment 4.2 per cent.

The low rate of activity in the residential sector this year is highlighted by statistics of housing construction. Over the first three quarters of 1970, housing units started totalled 119,153 and units completed 129,114. Comparable totals for 1969 were 161,273 and 140,215 respectively. Again, units under construction at the end of September this year amounted to 124,765 compared with 145,036 last year. Starts, which were running at an annual rate of 186,000 in the fourth quarter of 1969 dipped to 166,200 in the first quarter and down further to 136,600 in the second quarter. However, they rebounded to 185,800 in the third quarter. Under the stimulus of a further injection of federal funds for direct lending in low-rental housing, starts are expected to range between 180,000 and 185,000 for 1970 as a whole.

Non-farm Business Inventories

Accumulation of non-farm business inventories in the third quarter of 1970, seasonally adjusted, amounted to $828 million as compared to one of

Value of Physical Change in Non-farm Business Inventories

Seasonally adjusted at annual rates

	1970		
	1 Q	2 Q	3 Q
	millions of dollars		
Manufacturing	452	– 152	24
Durable goods	268	– 200	– 84
Non-durable goods	184	48	108
Wholesale trade	156	36	204
Retail trade	– 96	560	404
"Other" industries	96	92	196
Totals	**608**	**536**	**828**

$536 million in the previous quarter. Nearly 50 per cent of the total accumulation occurred in the stocks of retailers, while wholesalers contributed about 25 per cent. Manufacturers' contribution to the present quarter accumulation was a very moderate one.

Though small, the accumulation in manufacturing inventories represented a sharp swing after the $152 million liquidation which occurred in the second quarter. Most stocks of durables were again depleted in the third quarter, but at a lower rate than in the second quarter. One notable exception was provided by the transportation goods-producing industries, which showed a substantial accumulation. The reverse was true of non-durables, where the only liquidations were those which occurred in the stocks of the tobacco and of the printing industries. By level of processing, there was a sizable build-up of goods-in-process, a moderate one of finished goods and no change in raw materials.

The accumulation in wholesale trade was almost entirely in non-durables, which showed a substantial increase in the rate of investment over the second quarter. Almost all of the build-up was accounted for by increases in the stocks of groceries and drugs, as offsetting movements left other non-durables unchanged. In durables, the marginal increase in stocks followed a substantial liquidation in the second quarter. Within this group, there was a shift in the stocks of construction materials, especially wood, from a substantial liquidation last quarter to a sizable accumulation this quarter. Conversely, there was a sharp decline in the stocks of industrial and transportation equipment and supplies, after a large build-up in the previous period.

More than 60 per cent of the increase in stocks of retail trade took place in durable goods, where it was concentrated in motor vehicle dealers, who experienced a second consecutive large increase in stocks. In the non-durable trades, the more notable increases occurred in the stocks of government liquor stores and of food stores.

Exports and Imports of Goods and Services

Preliminary results for the third quarter indicate that the balance on current account on a national accounts basis, moved from a surplus of $1,056 million at annual rates to a surplus of $720 million. The merchandise surplus dropped by $140 million to $2,636 million, while the non-merchandise deficit widened by $196 million to $1,916 million.

Transactions with Non-Residents

Seasonally Adjusted at Annual Rates

(National Accounts Basis)

	Exports			Imports		
	2 Q '70	3 Q '70	Per cent change	2 Q '70	3 Q '70	Per cent change
	millions of dollars			millions of dollars		
Goods	17,064	16,664	- 2.3	14,288	14,028	- 1.8
Services	4,084	4,172	2.2	5,804	6,088	4.9
Totals	**21,148**	**20,836**	**- 1.5**	**20,092**	**20,116**	**0.1**

The main factors in the higher deficit on services were lower receipts and higher payments for travel and higher official contributions. The drop in the surplus on merchandise trade resulted from a fall of $400 million at annual rates in receipts offsetting a fall of $260 million in payments. The drop in merchandise exports was entirely due to a sizable decline in sales to the United States and to a smaller decline in sales to the United Kingdom. Exports to other countries rose in the quarter. Imports purchases were maintained from Britain but were lower from other overseas suppliers and American sources.

Taking the first nine months as a whole, buoyant export demand has provided the major support to the Canadian economy so far this year. Merchandise exports rose by 15.6 per cent over the comparable period of 1969. Although export gains were recorded over a wide range of commodities, the most notable increases were in the sales of wheat, nickel, copper and crude petroleum. Interestingly, the bulk of the increase this year was directed to markets other than the United States, even though the latter country accounts for close to three-fourths of Canadian exports. (Merchandise exports to the United States rose by 6.2 per cent.)

In contrast to exports, merchandise imports rose by a modest 2.4 per cent. Declining machinery and equipment capital spending, as well as slow growth in consumer demand contributed to the sluggishness of imports. In particular, imports of transportation and communication equipment fell over the period.

These trade developments resulted in a spectacular increase in the surplus on merchandise account from $586 million in the first three quarters of 1969[2] to $2,029 million so far this year. Although there was a slight deterioration in non-merchandise trade, due mainly to higher interest and dividends payments, the overall current account balance with non-residents, on a national accounts basis, swung from a deficit of $725 million to a surplus of $678 million – the first overall surplus for a comparable time period since 1952.

The Government Sector

Total current expenditures of all levels of government combined, excluding inter-governmental transfers, rose by $828 million or just over 3 per cent in the third quarter. The largest absolute increase took place in transfer payments to persons with the increase equally divided between the federal and provincial levels. The main cause of the rise at the federal level was higher unemployment insurance benefits; at the provincial level most of the increase was in higher grants for post-secondary education and in a miscellaneous group of payments. Outlays on current goods and services rose by about half as much as transfers to persons with sharp increases at the provincial and local levels offset by a decline in federal expenditures. Transfer payments to non-residents also rose during the quarter. Subsidy payments declined at the federal level from the high rate of the second quarter. The other expenditure categories showed little change.

Total revenues of all governments rose slightly during the quarter, by about 1 per cent. Most categories showed little change, but this masked offsetting movements at the individual levels of government. Revenue from federal personal income taxes rose while provincial personal income tax revenues declined. Similarly, federal indirect taxation revenues increased, mainly from excise taxes and customs import duties; at the provincial level, revenues from this source declined. Government investment income rose, the largest part of the increase taking place at the federal level.

As a result of expenditures rising more sharply than revenues the surplus, on a national accounts basis and seasonally adjusted at annual rates, of the government sector as a whole fell from a rate of $1,800 million in the second quarter to a rate of $1,240 million in the third quarter.

In the first nine months of 1970, total government current expenditure, excluding inter-governmental transfers, rose by almost 15 per cent. The major portion of the increase was in expenditure on goods and services, due largely to higher wage and salary payments and to the extension of the Medicare program. Government capital expenditures were virtually unchanged. Total revenues of all governments rose by almost 10 per cent with over half of the rise taking place in revenue from personal income taxes, particularly at the federal level. As a result of expenditures rising more rapidly than revenues, the surplus, on a national accounts basis, of the government sector was about $500 million lower than the surplus recorded in the first nine months of 1969.

The Components of Income

Labour Income

The modest increase of 1.2 per cent in labour income represented an improvement over the unusually low increase of 0.6 per cent in the second quarter. The acceleration was due to a renewed rise in the goods-producing industries, of 0.8 per cent, after a decline in the second quarter. Wages and salaries in the service-producing industries decelerated in the quarter to a rate of 1.4 per cent, compared with 1.7 per cent last quarter. In the last two quarters, wages and salaries in both the goods-producing and the service-producing industries have displayed considerable weakness as compared with average performance in previous periods. This slowdown appears mainly due to lower increases in employment or, in some industries, to actual declines.

Wages and salaries in manufacturing, where employment has been declining in recent months, continued to rise very slowly, by 0.4 per cent compared with 0.7 per cent in the second quarter. A higher incidence of labour disputes this quarter also contributed to the slowdown. Construction rose by 2.4 per cent, after a sharp fall in the second quarter of 6.8 per cent largely due to strikes. The primary industries showed an increase of 0.4 per cent. Within that group, increases in fishing and trapping, up 2.1 per cent, and in mining, up 2.3 per cent, offset a 5.5 per cent decline in forestry.

Within the service-producing industries, all groups showed increases. Transportation, communication and utilities rose by 0.4 per cent, trade by 0.7 per cent, finance by 2.0 per cent, and public administration by 0.9 per cent. Within service, which advanced by 2.6 per cent, non-commercial service rose by 3.8 per cent and commercial services by 0.4 per cent.

---

[2] See revised balance of payments estimates, revision note on page 116.

Corporation Profits

Preliminary estimate of corporation profits indicate a slight increase of 1.1 per cent in the third quarter. Profits had declined sharply in the third quarter of 1969. Since then, except for a temporary spurt in the first quarter of this year, they have fluctuated between the relatively narrow limits of $7.5 and $7.6 billion. For the first nine months of this year, profits were 4.5 per cent below their level for the comparable period of 1969. Gross profits, which include depreciation charges, have shown a relatively flat trend since the first quarter of 1969.

Net Income of Unincorporated Business

Accrued net income of farm operators from farm production declined by almost 12 per cent in the quarter to a rate of $1,276 million. An increase in the value of grain production and higher government subsidy payments were more than offset by a decline in the value of livestock production.

Net income of non-farm unincorporated business including rent rose by about 2 per cent in the quarter. The largest increase took place in net income of the construction industry; the other industry groupings showed little change.

Real Domestic Product

Real Domestic Product at factor cost[3] rose by 0.6 per cent in the third quarter of this year, following a slight decrease in the second quarter, and an increase of 0.5 per cent in the first quarter. The second quarter was dampened by the construction and the manufacturing industries, with strikes affecting the output of the construction industry, while the first quarter was affected by recoveries in the production of nickel-copper from the previous year's strikes. The mild upturn in the third quarter originated mainly with the trade series – predominantly wholesale sales of grain in August and July. Mining also rose significantly in the quarter, based on increases in miscellaneous metal mining and crude petroleum and natural gas, as did transportation, storage and communication, based on rail and water shipments of grain products to world markets and continued advances in air and pipeline transport. These and other increases more than offset the second quarterly decrease for manufacturing, that was mainly the result of the September strike in the motor vehicle manufacturing industry, and the pulp and paper strikes in British Columbia in August and September.

---

[3] It should be noted that the movements described here may not always coincide with the constant price Gross National Expenditure data in the quarterly national income and expenditure accounts, due to conceptual and statistical differences.

REVISION NOTE

The Balance of Payments Division revised data for 1968 and 1969. Revised figures are shown in "Quarterly Estimates of the Canadian Balance of International Payments Second Quarter 1970", DBS 67-001. These revisions have not been incorporated in the National Accounts. They are shown below on a National Accounts Basis.
